

AC and Pulse Metallized Polypropylene Film Capacitors MKP Radial Potted Type

Dimensions in mm
⁽¹⁾ $|F - F'| < 0.3 \text{ mm}$
 $F = 7.5 + 0.6/-0.1 \text{ mm}$

APPLICATIONS

Where steep pulses occur e.g. SMPS (switch mode power supplies). Electronic lighting e.g. ballast. Motor control circuits.

REFERENCE SPECIFICATIONS

IEC 60384-17

MARKING

C-value; tolerance; rated voltage; code for dielectric material; manufacturer location; manufacturer's type; manufacturer's logo; year and week

DIELECTRIC

Polypropylene film

ELECTRODES

Metallized

CONSTRUCTION

Internal serial construction

RATED (DC) VOLTAGE

1600 V, 2000 V

RATED (AC) VOLTAGE

550 V, 700 V

RATED PEAK-TO-PEAK VOLTAGE

1600 V, 2000 V

FEATURES

7.5 mm bent back pitch, 10 mm and 15 mm lead pitch. Low contact resistance. Low loss dielectric. Small dimensions for high density packaging. Supplied loose in box and taped on reel.

RoHS compliant product.

ENCAPSULATION

Flame retardant plastic case and epoxy resin
 UL-class 94 V-0

CLIMATIC TESTING CLASS ACC. TO IEC 60068-1

55/110/56

CAPACITANCE RANGE (E24 SERIES)

0.00047 to 0.033 μF

CAPACITANCE TOLERANCE

$\pm 5 \%$

LEADS

Tinned wire

RATED (DC) TEMPERATURE

85 °C

RATED (AC) TEMPERATURE

85 °C

MAXIMUM APPLICATION TEMPERATURE

110 °C

MAXIMUM OPERATING TEMPERATURE FOR LIMITED TIME

125 °C

PERFORMANCE GRADE

Grade 1 (long life)

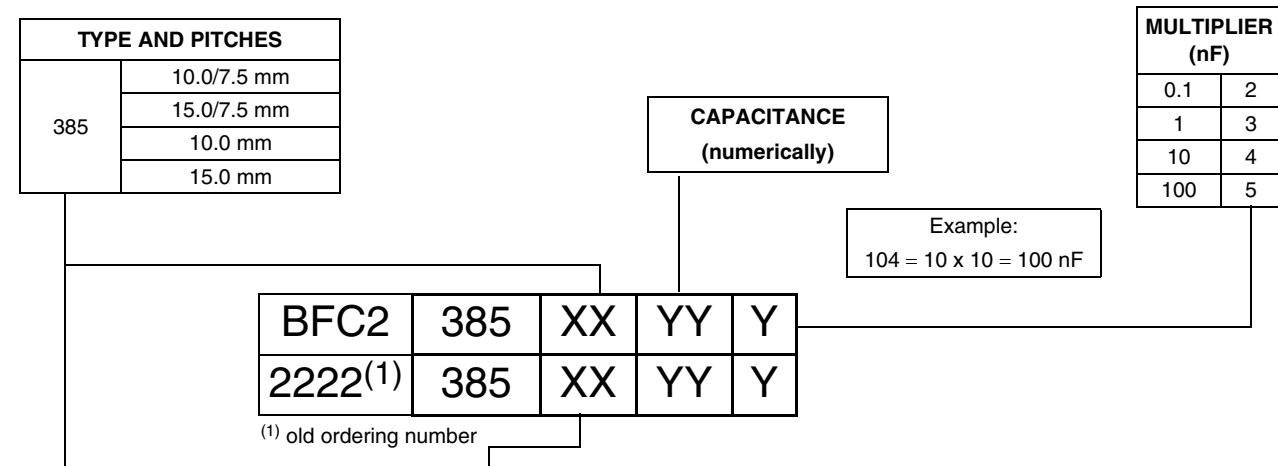

STABILITY GRADE

Grade 2

MOUNTING

Normal use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting on printed-circuit boards by means of automatic insertion machines.

For detailed tape specifications refer to "Packaging Information" www.vishay.com/doc?28139 or end of catalog

Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that the stand-off pips are in good contact with the printed-circuit board. The capacitors shall be mechanically fixed by the leads.

Space Requirements on Printed-Circuit Board

The maximum length and width of film capacitors is shown in the drawing:

- Eccentricity as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.
- Product height with seating plane as given by "IEC 60717" as reference: $h_{\max.} \leq h + 0.3 \text{ mm}$.

Storage Temperature

- Storage temperature: $T_{\text{stg}} = -25 \text{ }^{\circ}\text{C}$ to $+40 \text{ }^{\circ}\text{C}$ with RH maximum 80 % without condensation

Ratings and Characteristics Reference Conditions

Unless otherwise specified, all electrical values apply to an ambient free temperature of $23 \text{ }^{\circ}\text{C} \pm 1 \text{ }^{\circ}\text{C}$, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of $50 \% \pm 2 \%$.

For reference testing, a conditioning period shall be applied over $96 \text{ h} \pm 4 \text{ h}$ by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

AC and Pulse Metallized Polypropylene Film Capacitors Vishay BCcomponents
MKP Radial Potted Type

CHARACTERISTICS

Capacitance as a function of ambient temperature (typical curve) (1 kHz)

Impedance as a function of frequency (typical curve)

Max. DC and AC voltage as a function of temperature

Max. RMS voltage as a function of frequency

Max. RMS voltage as a function of frequency

Max. RMS voltage as a function of frequency

Max. RMS voltage as a function of frequency

Insulation resistance as a function of ambient temperature
(typical curve)

Maximum allowed component temperature rise (ΔT)
as a function of ambient temperature (T_{amb})

Tangent of loss angle as a function of frequency
(typical curve)

HEAT CONDUCTIVITY (G) AS A FUNCTION OF ORIGINAL PITCH AND CAPACITOR BODY THICKNESS IN mW/°C

W _{max.} (mm)	HEAT CONDUCTIVITY (mW/°C)	
	PITCH 10 mm	PITCH 15 mm
4.0	6.5	-
5.0	7.5	10
6.0	9.0	11
7.0	-	12
8.5	-	16
10.0	-	18

POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free air ambient temperature.

The power dissipation can be calculated according type detail specification “HQN-384-01/101: Technical Information Film Capacitors” with the typical tgδ of the curves.

The component temperature rise (ΔT) can be measured (see section “Measuring the Component Temperature” for more details) or calculated by $\Delta T = P/G$:

- ΔT = Component temperature rise (°C)
- P = Power dissipation of the component (mW)
- G = Heat conductivity of the component (mW/°C)

MEASURING THE COMPONENT TEMPERATURE

A thermocouple must be attached to the capacitor body as in:

The temperature is measured in unloaded (T_{amb}) and maximum loaded condition (T_c).

The temperature rise is given by $\Delta T = T_c - T_{amb}$.

To avoid radiation or convection, the capacitor should be tested in a wind-free box.

APPLICATION NOTE AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described hereunder. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

To select the capacitor for a certain application, the following conditions must be checked:

1. The peak voltage (U_p) shall not be greater than the rated DC voltage (U_{Rdc})
2. The peak-to-peak voltage (U_{p-p}) shall not be greater than the maximum (U_{p-p}) to avoid the ionisation inception level
3. The voltage peak slope (dU/dt) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by U_{Rdc} and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left(\frac{dU}{dt} \right)^2 \times dt < U_{Rdc} \times \left(\frac{dU}{dt} \right)_{rated}$$

T is the pulse duration

4. The maximum component surface temperature rise must be lower than the limits (see figure max allowed component temp rise)
5. Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: "Heat conductivity"
6. When using these capacitors as across-the-line capacitor in the input filter for mains applications or as series connected with an impedance to the mains the applicant must guarantee that the following conditions are fulfilled in any case (spikes and surge voltages from the mains included).

Voltage Conditions for 6 Above

ALLOWED VOLTAGES	$T_{amb} \leq 85 \text{ }^\circ\text{C}$	$85 \text{ }^\circ\text{C} < T_{amb} \leq 110 \text{ }^\circ\text{C}$	$110 \text{ }^\circ\text{C} < T_{amb} \leq 125 \text{ }^\circ\text{C}$
Maximum continuous RMS voltage	U_{Rac}	$0.7 \times U_{Rac}$	$0.5 \times U_{Rac}$
Maximum temporary RMS-overvoltage (< 24 h)	$1.25 \times U_{Rac}$	$0.875 \times U_{Rac}$	$0.625 \times U_{Rac}$
Maximum peak voltage (V_{o-p}) (< 2 s)	$1.6 \times U_{Rdc}$	$1.1 \times U_{Rdc}$	$0.8 \times U_{Rdc}$

EXAMPLE

$C = 4n7 \text{ } 1600 \text{ V}$ used for the voltage signal shown in next figure.

$U_{p-p} = 1000 \text{ V}$; $U_p = 900 \text{ V}$; $T_1 = 12 \text{ } \mu\text{s}$; $T_2 = 64 \text{ } \mu\text{s}$; $T_3 = 4 \text{ } \mu\text{s}$

The ambient temperature is $80 \text{ }^\circ\text{C}$. In case of failure, the oscillation is blocked.

Checking the conditions:

1. The peak voltage $U_p = 900 \text{ V}$ is lower than 1600 Vdc
2. The peak-to-peak voltage 1000 V is lower than $2 \sqrt{2} \times 550 \text{ Vac} = 1600 \text{ } U_{p-p}$
3. The voltage pulse slope $dU/dt = 1000 \text{ V} / 4 \text{ } \mu\text{s} = 250 \text{ V}/\mu\text{s}$. This is lower than $4000 \text{ V}/\mu\text{s}$ (see specific reference data for each version)
4. The dissipated power is 35 mW as calculated with Fourier terms and typical $\text{tg}\delta$.
The temperature rise for $w_{max} = 6.0$ and pitch = 10 mm will be $35 \text{ mW} / 9 \text{ mW}/^\circ\text{C} = 3.9 \text{ }^\circ\text{C}$
This is lower than $10 \text{ }^\circ\text{C}$ temperature rise at $80 \text{ }^\circ\text{C}$, acc. figure.
5. Oscillation is blocked
6. Not applicable

INSPECTION REQUIREMENTS

General Notes:

Sub-clause numbers of tests and performance requirements refer to the “Sectional Specification, Publication IEC 60384-17 and Specific Reference Data”.

Group C Inspection Requirements

SUB-CLAUSE NUMBER AND TEST	CONDITIONS	PERFORMANCE REQUIREMENTS
SUB-GROUP C1A PART OF SAMPLE OF SUB-GROUP C1		
4.1 Dimensions (detail)		As specified in chapters “General Data” of this specification
4.3.1 Initial measurements	Capacitance Tangent of loss angle at 100 kHz	
4.3 Robustness of terminations	Tensile: Load 10 N; 10 s Bending: Load 5 N; 4 x 90°	No visible damage
4.4 Resistance to soldering heat	Method: 1A Solder bath: 280 °C ± 5 °C Duration: 10 s	
4.14 Component solvent resistance	Isopropylalcohol at room temperature Method: 2 Immersion time: 5 ± 0.5 min Recovery time: Min. 1 h, max. 2 h	
4.4.2 Final measurements	Visual examination Capacitance Tangent of loss angle	No visible damage Legible marking $ \Delta C/C \leq 1\% + 5\text{ pF}$ of the value measured initially Increase of $\tan \delta: \leq 0.0005$ Compared to values measured in 4.3.1
SUB-GROUP C1B PART OF SAMPLE OF SUB-GROUP C1		
4.6.1 Initial measurements	Capacitance Tangent of loss angle at 100 kHz	
4.15 Solvent resistance of the marking	Isopropylalcohol at room temperature Method: 1 Rubbing material: cotton wool Immersion time: 5 ± 0.5 min	No visible damage Legible marking
4.6 Rapid change of temperature	$\theta A = -55\text{ °C}$ $\theta B = +105\text{ °C}$ 5 cycles Duration $t = 30\text{ min}$	
4.6.1 Inspection	Visual examination	
4.7 Vibration	Mounting: See section “Mounting” of this specification Procedure B4 Frequency range: 10 Hz to 55 Hz Amplitude: 0.75 mm or Acceleration 98 m/s ² (whichever is less severe) Total duration 6 h	No visible damage

Vishay BCcomponents AC and Pulse Metallized Polypropylene Film Capacitors
MKP Radial Potted Type

SUB-CLAUSE NUMBER AND TEST	CONDITIONS	PERFORMANCE REQUIREMENTS
4.7.2 Final inspection 4.9 Shock 4.9.3 Final measurements	Visual examination Mounting: See section "Mounting" of this specification Pulse shape: Half sine Acceleration: 490 m/s ² Duration of pulse: 11 ms Visual examination Capacitance Tangent of loss angle Insulation resistance	No visible damage No visible damage For C $ \Delta C/C \leq 2\%$ or of the value measured in 4.6.1. Increase of tan δ : ≤ 0.0005 Compared to values measured in 4.6.1 As specified in section "Insulating Resistance" of this specification
SUB-GROUP C1 COMBINED SAMPLE OF SPECIMENS OF SUB-GROUPS C1A AND C1B		
4.10 Climatic sequence 4.10.2 Dry heat 4.10.3 Damp heat cyclic Test Db, first cycle 4.10.4 Cold 4.10.6 Damp heat cyclic Test Db, remaining cycles 4.10.6.2 Final measurements	Temperature: + 105 °C Duration: 16 h Temperature: - 55 °C Duration: 2 h Voltage proof = U_{Rdc} for 1 min within 15 min after removal from testchamber Visual examination Capacitance Tangent of loss angle Insulation resistance	No breakdown of flash-over No visible damage Legible marking $ \Delta C/C \leq 2\%$ of the value measured in 4.4.2 or 4.9.3 Increase of tan δ : ≤ 0.005 Compared to values measured in 4.3.1 or 4.6.1 $\geq 50\%$ of values specified in section "Insulation Resistance" of this specification
SUB-GROUP C2		
4.11 Damp heat steady state 4.11.1 Initial measurements 4.11.3 Final measurements	56 days, 40 °C, 90 % to 95 % RH no load Capacitance Tangent of loss angle at 1 kHz Voltage proof = U_{Rdc} for 1 min within 15 min after removal from testchamber Visual examination Capacitance Tangent of loss angle Insulation resistance	No breakdown of flash-over No visible damage Legible marking $ \Delta C/C \leq 1\% + 5\text{ pF}$ of the value measured in 4.11.1. Increase of tan $\delta \leq 0.0005$ Compared to values measured in 4.11.1 $\geq 50\%$ of values specified in section "Insulation Resistance" of this specification

AC and Pulse Metallized Polypropylene Film Capacitors Vishay BCcomponents
MKP Radial Potted Type

SUB-CLAUSE NUMBER AND TEST	CONDITIONS	PERFORMANCE REQUIREMENTS
SUB GROUP C3A		
4.12.1 Endurance	Duration: 2000 h Temperature: 85 °C Voltage: 1.25 x U _{Rac} V _{rms} , 50 Hz Duration: 2000 h Temperature: 105 °C	
4.12.1.1 Initial measurements	Voltage: 0.875 x U _{Rac} V _{rms} , 50 Hz Capacitance Tangent of loss angle at 100 kHz	
4.12.1.3 Final measurements	Visual examination Capacitance Tangent of loss angle Insulation resistance	No visible damage Legible marking Temperature: 85 °C $ \Delta C/C \leq 5\%$ for C > 10 nF $ \Delta C/C \leq 8\%$ for C ≤ 10 nF compared to values measured in 4.12.1.1 Increase of tan δ: ≤ 0.005 Compared to values measured in 4.12.1.1 ≥ 50 % of values specified in section "Insulation Resistance" of this specification
SUB GROUP C3B		
4.12.2 Endurance test at 50 Hz alternating voltage	Duration: 500 h Voltage:	
4.12.2.1 Initial measurements	0.625 x U _{Rac} at 125 °C Capacitance Tangent of loss angle:	
4.12.2.3 Final measurements	Visual examination Capacitance Tangent of loss angle Insulation resistance	No visible damage Legible marking $ \Delta C/C \leq 10\%$ for C + 100 pF compared values measured in 4.42.2.1 Increase of tan δ: ≤ 0.0005 Compared to values measured in 4.12.2.1 ≥ 50 % of values specified in section "Insulation Resistance" of this specification
SUB-GROUP C4		
4.2.6 Temperature characteristics Initial measurements Intermediate measurements	Capacitance Capacitance at - 55 °C Capacitance at - 20 °C Capacitance at + 125 °C	For - 55 °C to + 20 °C: + 1 % ≤ $ \Delta C/C $ ≤ 3.75 % or for 20 °C to 125 °C - 7.5 % ≤ $ \Delta C/C $ ≤ 0 % compared to values measured in 4.12.1.1
Final measurement	Capacitance Insulation resistance	As specified in section "Capacitance" of this specification As specified in chapters "Insulation Resistance" of this specification

Vishay BCcomponents AC and Pulse Metallized Polypropylene Film Capacitors MKP Radial Potted Type

SUB-CLAUSE NUMBER AND TEST	CONDITIONS	PERFORMANCE REQUIREMENTS
SUB-GROUP C4		
4.13 Charge and discharge 4.13.1 Initial measurements 4.13.3 Final measurements	10 000 cycles Charged to U_R Vdc Discharge resistance: $R = \frac{U_R}{C \times 2.5 \times (dU/dt)_R}$ Capacitance Tangent of loss angle: at 100 kHz or Capacitance Tangent of loss angle Insulation resistance	$ \Delta C/C \leq 1\%$ compared to values measured in 4.13.1 Increase of $\tan \delta$: ≤ 0.0005 Compared to values measured in 4.13.1 $\geq 50\%$ of values specified in section "Insulation Resistance" of this specification
SUB-GROUP ADD 1		
A.1 Ignition of lamp test A.1.1 Initial measurements A.1.2 Ignition of lamp test A.1.2 Final measurements	Capacitance Tangent of loss angle at 100 kHz Temperature: 85 °C 1000 cycles: 1 s ON 29 s OFF Frequency: 60 kHz Voltage: 1600 V type: 2800 V_{pp} 2000 V type: 3000 V_{pp} Visual examination Capacitance Tangent of loss angle at 100 kHz Insulation resistance	No visible damage $ \Delta C/C \leq 5\%$ of the value measured in A.1.1 Increase of $\tan \delta$: ≤ 0.0005 Compared to values measured in A.1.1 $\geq 50\%$ of values specified in section "Insulation Resistance" of this specification

Disclaimer

ALL PRODUCT, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Vishay"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and/or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.

Except as expressly indicated in writing, Vishay products are not designed for use in medical, life-saving, or life-sustaining applications or for any other application in which the failure of the Vishay product could result in personal injury or death. Customers using or selling Vishay products not expressly indicated for use in such applications do so at their own risk and agree to fully indemnify and hold Vishay and its distributors harmless from and against any and all claims, liabilities, expenses and damages arising or resulting in connection with such use or sale, including attorneys fees, even if such claim alleges that Vishay or its distributor was negligent regarding the design or manufacture of the part. Please contact authorized Vishay personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of Vishay. Product names and markings noted herein may be trademarks of their respective owners.
