# 1. Precautions and Safety Notices

## 1. Appropriate Operation

- (1) Turn off the product before cleaning.
- (2) Use only a dry soft cloth when cleaning the LCD panel surface.
- (3) Use a soft cloth soaked with mild detergent to clean the display housing.
- (4) Use only a high quality, safety approved AC/DC power cord.
- (5) Disconnect the power plug from the AC outlet if the product will not be used for a long period of time.
- (6) If smoke, abnormal noise, or strange odor is present, immediately switch the LCD display off.
- (7) Do not touch the LCD panel surface with sharp or hard objects.
- (8) Do not place heavy objects on the LCD display, video cable, or power cord.
- (9) Do not use abrasive cleaners, waxes or solvents for your cleaning.
- (10) Do not operate the product under the following conditions:
  - Extremely hot, cold or humid environment.
  - Areas containing excessive dust and dirt.
  - Near any appliance generating a strong magnetic field.
  - In direct sunlight.

## 2. Caution

No modification of any circuit should be attempted. Service work should only be performed after you are thoroughly familiar with all of the following safety checks and servicing guidelines.

## 3. Safety Check

Care should be taken while servicing this LCD display. Because of the high voltage used in the inverter circuit, the voltage is exposed in such areas as the associated transformer circuits.

## 4. LCD Module Handling Precautions

### 4.1 Handling Precautions

- (1) Since front polarizer is easily damaged, pay attention not to scratch it.
- (2) Be sure to turn off power supply when connecting or disconnecting input connector.
- (3) Wipe off water drops immediately. Long contact with water may cause discoloration or spots.
- (4) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- (5) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
- (6) Since CMOS LSI is used in this module, take care of static electricity and ensure human earth when handling.
- (7) Do not open or modify the Module Assembly.
- (8) Do not press the reflector sheet at the back of the module in any direction.
- (9) In the event that a Module must be put back into the packing container slot after it was taken out of the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CFL Reflector edge softly. Otherwise the TFT Module may be damaged.
- (10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate or tilt the Interface Connector of the TFT Module.

- (11) After installation of the TFT Module into an enclosure (LCD monitor housing, for example), do not twist or bend the TFT Module even momentarily. When designing the enclosure, it should be taken into consideration that no bending/twisting forces may be applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
- (12) The cold cathode fluorescent lamp in the LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- (13) The LCD module contains a small amount of materials having no flammability grade. The LCD module should be supplied with power that complies with the requirements of Limited Power Source (IEC60950 or UL1950), or an exemption should be applied for.
- (14) The LCD module is designed so that the CCFL in it is supplied by a Limited Current Circuit (IEC60950 or UL1950). Do not connect the CCFL to a Hazardous Voltage Circuit.

### 3. Front Panel Function Control Description

## Main Menu Controls

Adjust the menu items shown below by using the up and down buttons.

- A. **Auto Image Adjust** automatically sizes, centers, and fine tunes the video signal to eliminate waviness and distortion. Press the [2] button to obtain a sharper image.

**NOTE: Auto Image Adjust works with most common video cards. If this function does not work on your LCD display, then lower the video refresh rate to 60 Hz and set the resolution to its pre-set value.**

- B. **Contrast adjusts** the difference between the image background (black level) and the foreground (white level).
- C. **Brightness adjusts** the lamps current to control the screen brightness.
- D. **Input adjusts** the Analogue or the Digital input source
- E. **Audio Adjust** the volume increase or decrease and mute function
- F. **Color Adjust** provides several color options: preset color temperatures and Custom User Color which allows you to adjust red (R), green (G), and blue (B). The factory setting for this product is 6500K (6500° Kelvin).
- 9300K — Adds blue to the screen image for cooler white (used in most office settings with fluorescent lighting).
- 5400K — Adds red to the screen image for warmer white and richer red.
- Custom User Color — Individual adjustments for red, green, and blue.
- 1 To select color (R, G or B) press button [2].
- 2 To adjust selected color, press ▲ or ▼.
- 3 When you are finished making all color adjustments, press button [1] twice.

- G. **Information** displays the timing mode (video signal input) coming from the graphics card in your computer. See your graphic card's user guide for instructions on changing the resolution and refresh rate (vertical frequency). VESA 1280 x 1024 @ 60 Hz (recommended) means that the resolution is 1280 x 1024 and the refresh rate is 60 Hertz.

- H. **Manual Image Adjust** controls are explained below:

**H. Size (Horizontal Size)** adjusts the width of the screen image.

**NOTE: Vertical size is automatic with your LCD display.**

**H./V. Position** adjusts horizontal and vertical position of the screen image. You can toggle between Horizontal and Vertical by pressing button [2]. Horizontal moves the screen image to the left or to the right. Vertical moves the screen image up and down.

**Fine Tune** sharpens focus by aligning the illuminated text and/or graphic characters.

**Sharpness** adjusts the clarity and focus of the screen image.

**Setup Menu** controls are explained below:

**Language** allows you to choose the language used in the menus and control screens.

**Resolution Notice** displays the recommended resolution for this LCD display.

Enable allows the Resolution Notice to appear on-screen.

Disable will not allow the Resolution Notice to appear on-screen.

**OSD Timeout** sets the length of time an on-screen display screen is displayed. For example, with a "15 second" setting, if a control is not pushed within 15 seconds, the display OSD disappears.

- I. **OSD Position** allows you to move the on-screen display menus and control screens.

- J. **Memory Recall** returns adjustments to the original factory settings if the display is operating in a factory Preset Timing Mode listed in this user guide.

## 6. THEORY OF OPERATION

This section describes the function of the LCD monitor per functional block.

This monitor includes MB board, power board, Inverter board and button board.

### 6.1 MB BOARD

The MB board is a two-layer, single-landed. 12V DC power from the power adapter enters the board through connector CN6. Other connectors on the board are for audio speaker and button board. The VGA cable is a signal cable that contains video signal, sync signal and DDC signal from PC VGA adapter. This system board consists of 4 functional areas: flat panel controller, flash ROM, power regulator and Audio amplifier

#### 6.1.1 Flat panel controller... NT68563HF (IC2)

The heart of the system board is the scalar chip of NT68563HF. The scalar is a highly integrated flat panel display controller that interfaces analog, digital, and video inputs. It combines a triple ADC, a DVI compliant TMDS receiver, a multi-color on screen display (OSD) controller and many other functions in a single chip. It provides user a simple, flexible and cost-effective solution for various flat panel display products.

The NT68563HF operates at frequencies up to 205MHz (analog only), suitable for LCD monitor up to UXGA resolution. The NT68563HF also build-in noise reduction function to provide more stable video quality, spread spectrum to provide low EMI solution, sRGB for video color space convert, post pattern for manufacture test.

a) Clock Generation:

This is the input pair to an internal crystal oscillator and corresponding logic. A 12.000 MHz crystal is recommended.

b) Hardware Reset (Pin127):

Hardware Reset signal is provided by MCU (IC3), it is active high.

c) Analog to Digital Converter:

The NT68563HF chip has triple ADC's (analog-to-digital converters), one for each color (red, green and blue). The analog RGB and synchronous signals are connected to NT68563 as described below:

Pin Name	Pin Number
Red +	25
Red -	26
Green +	23
Green -	24
Blue +	20
Blue -	21
H sync	39
V sync	40

- d) Internal OSD: Internal SRAM allows up to 2048 characters, with programmable OSD frame size. Width is 64 columns, and Height is 32 row.
- e) On chip TMDS receiver: The NT68563HF integrated TMDS receiver, which operates up to 165MHz and can directly connect to all DVI compliant TMDS transmitters. The TMDS signals are connected to NT68563HF as described below:

Pin Name	Pin NO.
TX0+	9
TX0-	8
TX1+	6
TX1-	5
TX2+	3
TX2-	2
TXC+	11
TXC-	12

### 6.1.2 Mcu flash ROM

This is an 8031 CPU core embedded micro-controller, which is design for high-performance low-cost LCD monitor control application. It contains an 8-bit 8031 micro-controller, on-chip 64 K bytes flash-type program ROM, 1,280-bytes internal data memory, four 7-bit resolution A/D Converter, 10-channel 8-bit resolution PWM DAC, two 16-bit timer/counters, and a UART.

- a) PWM controlling function (Pin 8, Pin 9): The MCU 68F633 has two GPIO to control audio volume and back light brightness.
- b) Serial interface ports pin 25~26(DVI) and pin 27~28(VGA): This serial interface ports communicate with MCU and support up to 400Kbit per second transmit rate.

**6.1.2 Power Regulator AIC1563 (U1), AIC1117 (U3, U4, U5):** The AIC1563 is a monolithic control IC containing the primary functions required for DC-to-DC converters. The device consists of an internal temperature compensated reference, comparator, controlled duty cycle.

Oscillator with an active current sense circuit, desired output voltage are determined by the equation,

$$\text{Volt} = 1.25 * (1 + R121 / R122), \text{ in this case, the output voltage are 5 Volts}$$

AIC1117 (U3, U4, U5): The AIC1117 is a low dropout positive adjustable regulator with minimum of 800mA output current capability.

So it is well suited for 3.3 V and 2.5 V Regulator.

U5 as a 1.8V regulator, desired output voltage are determined by the equation

$$\text{Volt} = 1.25 \times (1 + R90/R88) = 1.8$$

U3 as a 3.3V regulator, desired output voltage are determined by the equation

$$\text{Volt} = 1.255 \times (1 + R86/R85) = 3.3$$

U4 as a 3.3V regulator, desired output voltage are determined by the equation

$$\text{Volt} = 1.255 \times (1 + R89/R87) = 3.3$$

### 6.2 Audio Amplifier UTC TDA7496L (U9)

The TDA7496L is a stereo 2W+2W class AB power amplifier; Features of the TDA7496L include linear volume control, Stand-by and mute functions.
