

Low Supply Voltage 75Ω Driver MM1671

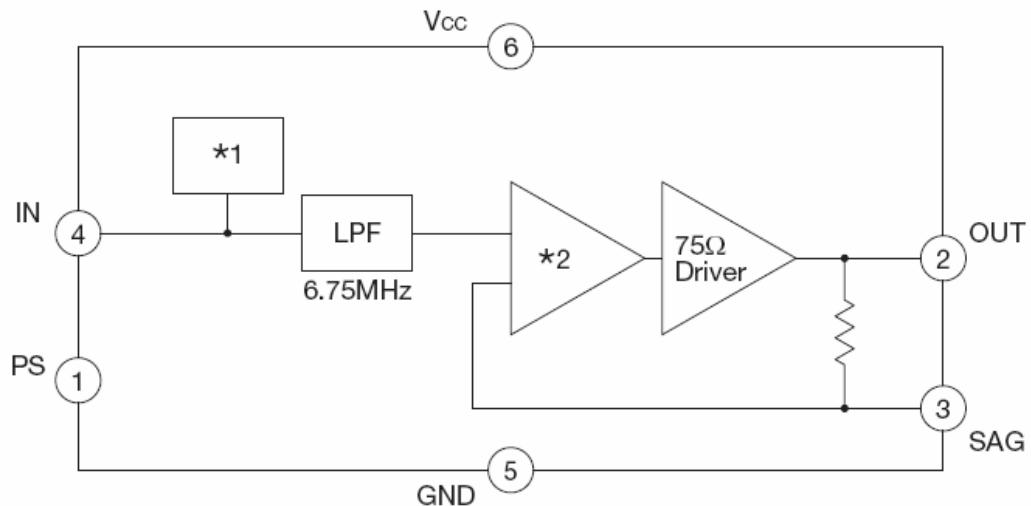

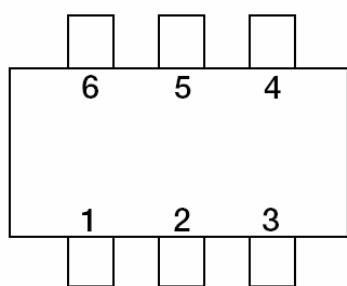

DESCRIPTIONS

This IC is a 75Ω driver with a built-in LPF that can operate at low voltage. It supports 3V and 5V operating power voltage, and is ideal for video signal output in devices ranging from portable digital still cameras to stationary equipment such as DVD players. It incorporates a high performance 4-stage LPF, which is ideal for removing DAC sampling noise. In addition, ultra-low current consumption has been achieved by suppressing current consumption during power save to under 1μA. This lengthens the life of the batteries in portable devices.

The built-in amp gain on this IC is 6dB and there is also with input clamp, allowing support for a range of video signals, not just composite signals.

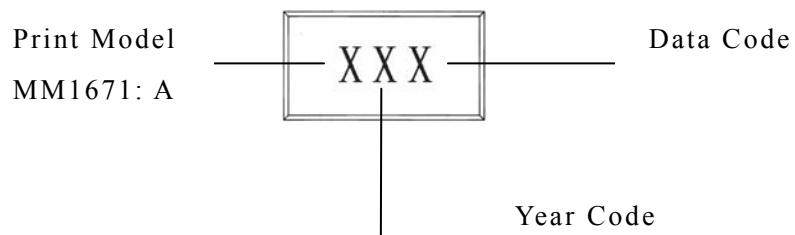

FEATURES

- Operating power voltage 2.8~5.5V (supports 3V and 5V systems)
- Operating temperature range -40~85°C
- Current consumption (no signal) 7.0mA typ.
- Current consumption during power save 1.0μA max.
- High precision voltage gain $6 \pm 0.3\text{dB}$ at 100kHz
- Built-in high-performance 4-stage LPF 6.75MHz/100kHz max. $\pm 1.0\text{dB}$
27MHz/100kHz typ. -40dB
- Built-in sag auxiliary circuit
- Built-in 6dB amp output gain available
- available with input clamp
- Ultra-small package
