

### 3-Terminal Positive Voltage Regulator

# LM7812XJ3

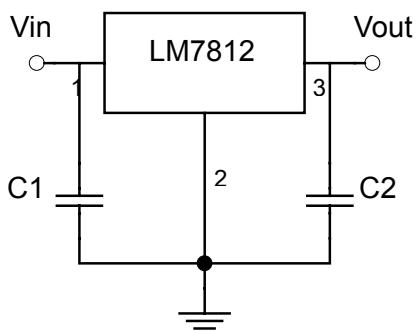

### Description

The LM7812XJ3 series of three-terminal positive regulators are available in the TO-252 package. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each employs internal current limiting, thermal shutdown and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents. LM7812XJ3 is characterized for operation from 0°C to +125°C, and if operating temperature is always high, please refer to the power dissipation curve.

### Absolute Maximum Ratings (Ta=25°C)

• Input Voltage .....	35 V
• Total Power Dissipation .....	Internally limited
• Operating Temperature Range .....	0 °C to +125 °C
• Maximum Junction Temperature .....	125 °C
• Storage Temperature Range .....	-55 °C to +150 °C
• Lead Temperature (Soldering 10S).....	230 °C

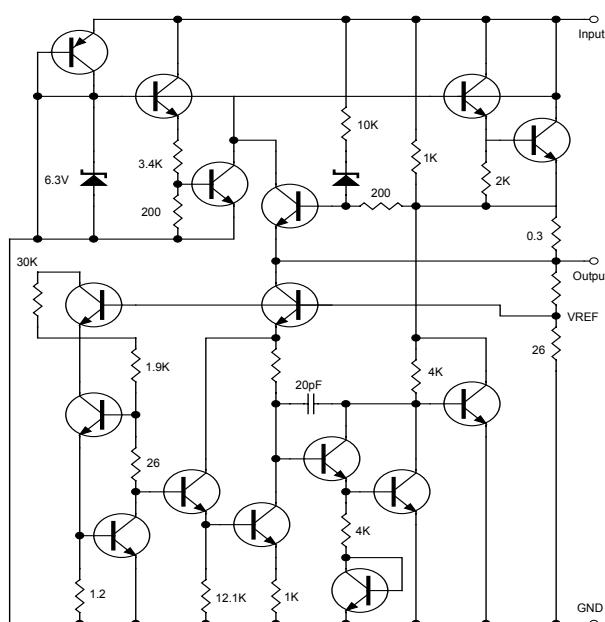

### Typical Application

#### Note:

C1 and C2 are required if regulator is located far from power supply filter and load, or oscillation may induced on the loop.
