APPLICATION NOTE

1.Requirement on output load

In order to ensure the product operate efficiently and reliably, in addition to a max load (namely full load), a minimum load is specified for this kind of DC/DC converter. Make sure the specified range of input voltage is not exceeded, the minimum output load no less than 10% load. If the actual load is less than the specified minimum load, the output ripple may increase sharply while its efficiency and reliability will reduce greatly. If the actual output power is very small, please add an appropriate resistor as extra loading, or contact our company for other lower output power products.

2. Recommended Circuit

All the TPD-3W Series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load (see Figure 1). If you want to further decrease the input/output ripple, you can increase capacitance properly or choose capacitors with low ESR. However, the capacitance should not be too high, or may cause start-up problem. If you want to use the products in high EMI, please choose our metal packaged products (TPD-3W). For every channel of output, provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor sees (Table 1).

General: Cin: 5V,12V 100μF

24V,48V 22μF/10μF

Cout: 10μF/100mA

Vout(VDC)	Cout(VDC)
5	680
9	470
12	330
15	220
24	100

3. Input current

While using unstable power source, please ensure the output voltage and ripple voltage do not exceed indexes of the converter. The preceding power source must be able to provide for converter sufficient starting current Ip (Figure 2).

General: Ip ≤ 1.4*In-max

APPLICATION NOTES | **TEMPERATURE DERATING GRAPHS**

1.No parallel connection or plug and play
 2.The load shouldn't be less than 10%, otherwise ripple will increase dramatically.
 3.Operation under 10% load will not damage the converter; However, they may not meet all specification listed.
 4.All specifications measured at Ta=25°C, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
