

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

PRELIMINARY PRODUCT INFORMATION

MOS INTEGRATED CIRCUIT

μ PD78F4937

16-BIT SINGLE-CHIP MICROCONTROLLER

The μ PD78F4937, 78K/IV Series' product, is a flash memory version of the μ PD784937 with internal masked ROM. Data can be written to or erased from the flash memory of the μ PD78F4937 with the microcontroller mounted on the printed wiring board.

**For specific functions and other detailed information, consult the following user's manuals.
These manuals are required reading for design work.**

μ PD784937 Subseries User's Manual, Hardware : To be created
78K/IV Series User's Manual, Instruction : U10905E

FEATURES

- Pin-compatible with mask ROM model (except V_{PP} pin)
- Flash memory: 192K bytes
- Internal RAM: 8,192 bytes
- Same operating voltage as mask ROM model ($V_{DD} = 4.0$ to 5.5 V)

ORDERING INFORMATION

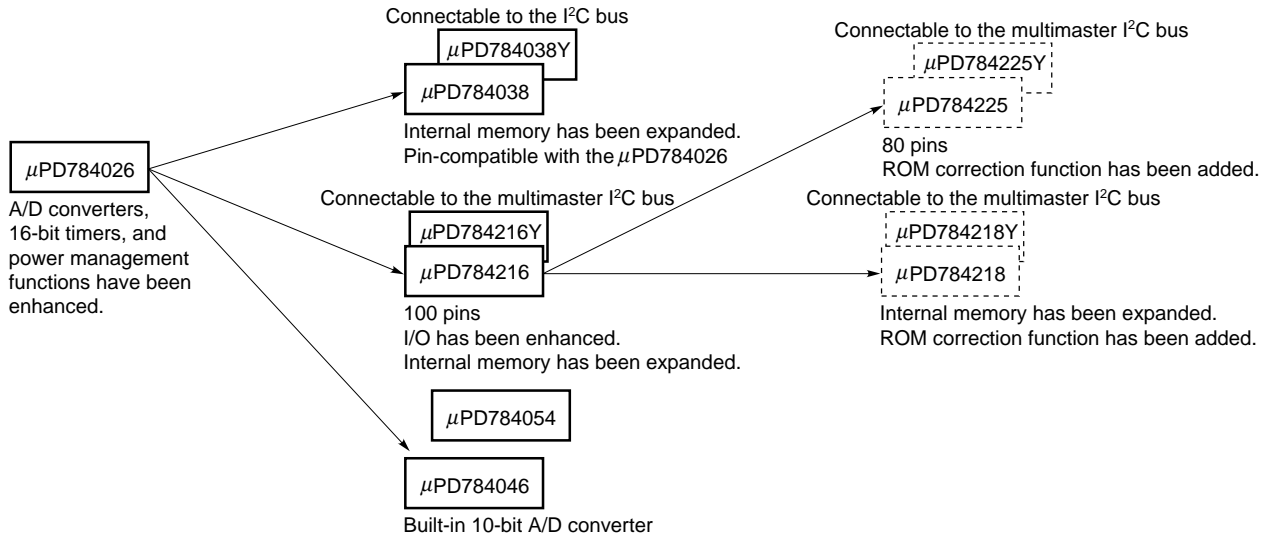

Part number	Package	Internal ROM
μ PD78F4937GC-8EU	100-pin plastic LQFP (fine pitch) (14 × 14 mm)	Flash memory
μ PD78F4937GF-3BA	100-pin plastic QFP (14 × 20 mm)	Flash memory

The information contained in this document is being issued in advance of the production cycle for the device. The parameters for the device may change before final production or NEC Corporation, at its own discretion, may withdraw the device prior to its production.

FUNCTIONS

(1/2)

Item		Function	
Number of basic instructions (mnemonics)		113	
General-purpose register		8 bits × 16 registers × 8 banks, or 16 bits × 8 registers × 8 banks (memory mapping)	
Minimum instruction execution time		160 ns/320 ns/636 ns/1.27 μs (at 12.58 MHz)	
Internal memory	Flash memory	192K bytes	
	RAM	8,192 bytes	
Memory space		Program and data: 1M byte	
I/O ports	Total	80	
	Input	8	
	Input/output	72	
Additional function pins <small>Note</small>	LED direct drive outputs	24	
	Transistor direct drive	8	
	N-ch open drain	4	
Real-time output ports		4 bits × 2, or 8 bits × 1	
IEBus controller		Incorporated (simple version)	
Timer/counter		Timer/counter 0 : (16 bits)	Timer register × 1 Capture register × 1 Compare register × 2 Pulse output capability • Toggle output • PWM/PPG output • One-shot pulse output
		Timer/counter 1 : (16 bits)	Timer register × 1 Capture register × 1 Capture/compare register × 1 Compare register × 1 Real-time output port
		Timer/counter 2 : (16 bits)	Timer register × 1 Capture register × 1 Capture/compare register × 1 Compare register × 1 Pulse output capability • Toggle output • PWM/PPG output
		Timer 3 : (16 bits)	Timer register × 1 Compare register × 1
Clock timer		Interrupt requests are generated at 0.5-second intervals. (A clock timer oscillator is incorporated.) Either the main clock (12.58 MHz) or real-timer clock (32.768 kHz) can be selected as the input clock.	
Clock output		Selected from f _{CLK} , f _{CLK} /2, f _{CLK} /4, f _{CLK} /8, or f _{CLK} /16 (can be used as a 1-bit output port)	
PWM outputs		12-bit resolution × 2 channels	
Serial interface		UART/IOE (3-wire serial I/O) : 2 channels (incorporating baud rate generator) CSI (3-wire serial I/O) : 2 channels	

Note Additional function pins are included in the I/O pins.

(2/2)

Item		Function
A/D converter		8-bit resolution × 8 channels
Watchdog timer		1 channel
ROM correction function		Internal (four correction addresses can be set.)
External expansion function		Provided (up to 1M byte)
Standby		HALT/STOP/IDLE mode
Interrupt	Hardware source	27 (20 internals, 7 externals (sampling clock variable input: 1))
	Software	BRK or BRKCS instruction, operand error
	Nonmaskable	1 internal, 1 external
	Maskable	19 internals, 6 externals
		<ul style="list-style-type: none"> • 4-level programmable priority • 3 operation statuses: vectored interrupt, macro service, context switching
Power supply voltage		V _{DD} = 4.0 to 5.5 V
Package		<ul style="list-style-type: none"> • 100-pin plastic LQFP (fine pitch) (14 × 14 mm) • 100-pin plastic QFP (14 × 20 mm)

1. DIFFERENCES AMONG MODELS IN μPD784937 SUBSERIES

The only difference among the μPD784935, μPD784936, and μPD784937 models lie in the internal memory capacity.

The μPD78F4937 has a 192K-byte flash memory instead of the mask ROM featured by the μPD784935, μPD784936, and μPD784937. Table 1-1 shows the differences among these products.

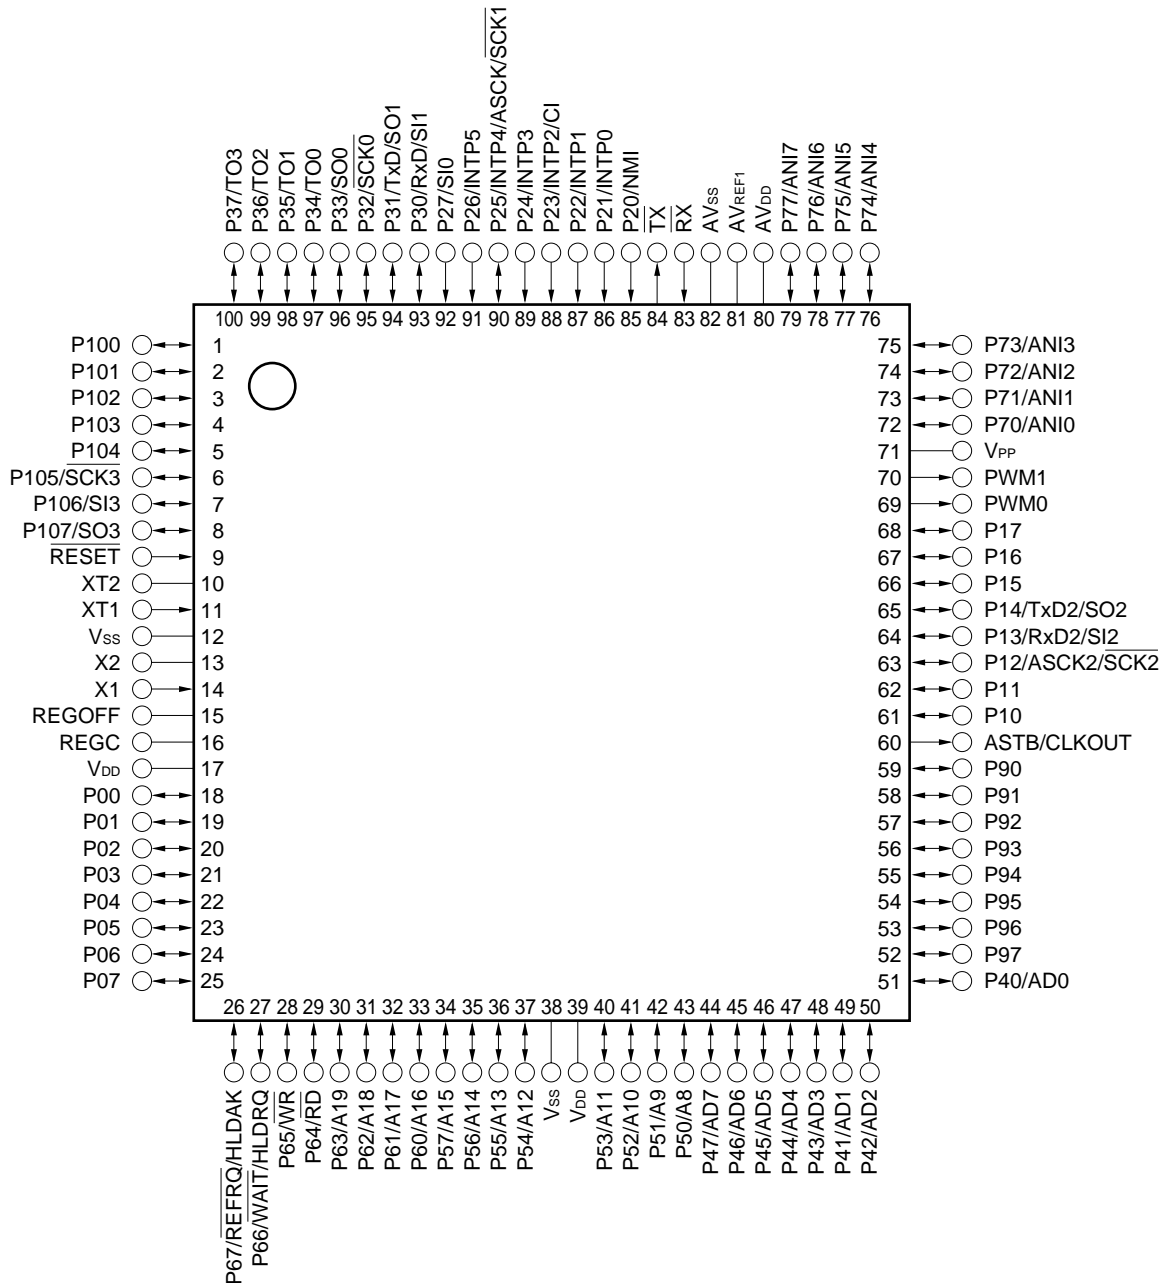

Table 1-1. Differences Among Models in μPD784937 Subseries

Product	μPD784935	μPD784936	μPD784937	μPD78F4937
Item				
Internal ROM	96K bytes	128K bytes	192K bytes	
	Mask ROM			Flash memory
Internal RAM	5,120 bytes	6,656 bytes	8,192 bytes	
Regulator	Provided			None
Internal memory switching register ^{Note}	None			Provided
IC pin	Provided			None
V _{PP} pin	None			Provided

Note The internal flash memory capacity and internal RAM capacity can be changed by setting the internal memory switching register (IMS).

2. PIN CONFIGURATION (TOP VIEW)

- 100-pin plastic LQFP (fine pitch) (14 × 14 mm)
μPD78F4937GC-8EU

- Cautions**
1. In normal operation, connect the V_{PP} pin directly to the V_{SS} pin.
 2. Connect the AV_{DD} pin directly to the V_{DD} pin.
 3. Connect the AV_{SS} pin directly to the V_{SS} pin.

- 100-pin plastic QFP (14 × 20 mm)
μPD78F4937GF-3BA

- Cautions**
1. In normal operation, connect the V_{PP} pin directly to the V_{SS} pin.
 2. Connect the AV_{DD} pin directly to the V_{DD} pin.
 3. Connect the AV_{SS} pin directly to the V_{SS} pin.

INTP5		P26	Input of a conversion start trigger for A/D converter
AD0-AD7	I/O	P40-P47	Time multiplexing address/data bus (for connecting external memory)
A8-A15	Output	P50-P57	High-order address bus (for connecting external memory)
A16-A19	Output	P60-P63	High-order address during address expansion (for connecting external memory)
$\overline{\text{RD}}$	Output	P64	Strobe signal output for reading the contents of external memory
$\overline{\text{WR}}$	Output	P65	Strobe signal output for writing on external memory
$\overline{\text{WAIT}}$	Input	P66/HLDRQ	Wait signal insertion
REFRQ	Output	P67/HLDAK	Refresh pulse output to external pseudo static memory
HLDRQ	Input	P66/ $\overline{\text{WAIT}}$	Input of bus hold request
HLDAK	Output	P67/ $\overline{\text{REFRQ}}$	Output of bus hold response
ASTB	Output	CLKOUT	Latch timing output of time multiplexing address (A0-A7) (for connecting external memory)

4.2 Non-Port Pins (2/2)

Pin	I/O	Dual-function	Function
CLKOUT	Output	ASTB	Clock output
PWM0	Output	–	PWM output 0
PWM1	Output	–	PWM output 1
R \bar{X}	Input	–	Data input (IEBus)
T \bar{X}	Output	–	Data output (IEBus)
REGC	–	–	Capacitor connection for stabilizing the regulator output
REGOFF	–	–	Signal for specifying regulator operation
RESE \bar{T}	Input	–	Chip reset
X1	Input	–	Crystal input for system clock oscillation (A clock pulse can also be input to the X1 pin.)
X2	–		
XT1	Input	–	Real-time clock connection pin
XT2	–	–	
ANI0-ANI7	Input	P70-P77	Analog voltage inputs for the A/D converter
AV _{REF1}	–	–	Application of A/D converter reference voltage
AV _{DD}			Positive power supply for the A/D converter
AV _{SS}			Ground for the A/D converter
V _{DD}			Positive power supply
V _{SS}			Ground
V _{PP}	Input		This pin is used to set the flash memory programming mode and applies a high voltage when a program is written or verified. In normal operation mode, connect this pin directly to the V _{SS} pin.

4.3 I/O Circuits for Pins and Handling of Unused Pins

Table 4-1 describes the types of I/O circuits for pins and the handling of unused pins.

Figure 4-1 shows the configuration of these various types of I/O circuits.

Table 4-1. Types of I/O Circuits for Pins and Handling of Unused Pins (1/2)

Pin	I/O circuit type	I/O	Recommended connection method for unused pins		
P00-P07	5-A	I/O	Input state: Connect these pins to the V _{DD} pin. Output state: Leave these pins open.		
P10, P11					
P12/ASCK2/SCK2	8-A				
P13/RxD2/SI2	5-A				
P14/TxD2/SO2					
P15-P17					
P20/NMI	2	Input	Connect these pins to the V _{DD} or V _{SS} pin.		
P21/INTP0					
P22/INTP1	2-A		Connect these pins to the V _{DD} pin.		
P23/INTP2/CI					
P24/INTP3					
P25/INTP4/ASCK/SCK1	8-A	I/O		Input state: Connect this pin to the V _{DD} pin. Output state: Leave this pin open.	
P26/INTP5	2-A	Input		Connect these pins to the V _{DD} pin.	
P27/SI0					
P30/RxD/SI1	5-A	I/O	Input state: Connect these pins to the V _{DD} pin. Output state: Leave these pins open.		
P31/TxD/SO1					
P32/SCK0	10-A				
P33/SO0					
P34/TO0-P37/TO3	5-A				
P40/AD0-P47/AD7					
P50/A8-P57/A15					
P60/A16-P63/A19					
P64/RD					
P65/WR					
P66/WAIT/HLDRQ					
P67/REFRQ/HLDAK					
P70/ANI0-P77/ANI7				20	I/O
P90-P97					
P100-P104	5-A				
P105/SCK3					
P106/SI3	8-A				
P107/SO3	10-A				
ASTB/CLKOUT	4	Output	Leave this pin open.		

Table 4-1. Types of I/O Circuits for Pins and Handling of Unused Pins (2/2)

Pin	I/O circuit type	I/O	Recommended connection method for unused pins
RESET	2	Input	–
XT2	–	–	Leave this pin open.
XT1	–	Input	Connect this pin to the V _{SS} pin.
REGOFF	1	–	Connect these pins to the V _{DD} pin.
REGC	–	–	
PWM0, PWM1	3	Output	Leave this pin open.
R \bar{X}	2	Input	Connect this pin to the V _{DD} or V _{SS} pin.
T \bar{X}	3	Output	Leave this pin open.
AV _{REF1}	–	–	Connect these pins to the V _{SS} pin.
AV _{SS}			Connect this pin to the V _{DD} pin.
AV _{DD}			
V _{PP}		Input	Connect this pin directly to the V _{SS} pin.

Caution When the I/O mode of an I/O dual-function pin is unpredictable, connect the pin to V_{DD} through a resistor of 10 to 100 kilohms (particularly when the voltage of the reset input pin becomes higher than that of the low level input at power-on or when I/O is switched by software).

Remark Since type numbers are consistent in the 78K Series, those numbers are not always serial in each product. (Some circuits are not included.)

Figure 4-1. I/O Circuits for Pins

5. INTERNAL MEMORY SWITCHING (IMS) REGISTER

This register enables the software to avoid using part of the internal memory. The IMS register can be set to establish the same memory mapping as used in ROM products that have different internal memory (ROM and RAM) configurations.

The IMS register is set using 8-bit memory operation instructions.
A $\overline{\text{RESET}}$ input sets the IMS register to FFH.

Figure 5-1. Internal Memory Switching (IMS) Register

Address: 0FFCH When reset: FFH W/R

	7	6	5	4	3	2	1	0
IMS	1	1	ROM1	ROM0	1	1	RAM1	RAM0

ROM1	ROM0	Internal ROM capacity selection
0	0	Not to be set
0	1	96K bytes
1	0	128K bytes
1	1	192K bytes

RAM1	RAM0	Internal RAM capacity selection
0	0	Not to be set
0	1	5,120 bytes
1	0	6,656 bytes
1	1	8,192 bytes

Caution The IMS is not contained in a mask ROM product (μPD784935, μPD784936, or μPD784937).

The IMS setting to obtain the same memory map as masked ROM products are shown in Table 5-1.

Table 5-1. Internal Memory Switching Register (IMS) Setting Value

Product	IMS setting value
μPD784935	DDH
μPD784936	EEH
μPD784937	FFH

6. FLASH MEMORY PROGRAMMING

The flash memory can be written even while the device is mounted in the target system (on-board write). To write a program into the flash memory, connect the dedicated flash writer (Flashpro III) to both the host machine and target system.

Remark The Flashpro III is manufactured by Naito Densai Machida Mfg. Co., Ltd.

6.1 Selecting the Transmission Method

The Flashpro III writes into flash memory by means of serial transmission. The transmission method to be used for writing is selected from those listed in Table 6-1. To select a transmission method, use the format shown in Figure 6-1, according to the number of V_{PP} pulses listed in Table 6-1.

Table 6-1. Transmission Methods

Transmission method	Number of channels	Pins	Number of V_{PP} pulses
3-wire serial I/O	1	$\overline{SCK3}/P105$ SO3/P107 SI3/P106	0
UART	1	TxD/SO1/P31 RxD/SI1/P30	8

Caution To select a transmission method, always use the corresponding number of V_{PP} pulses listed in Table 6-1.

Figure 6-1. Format of Transmission Method Selection

6.2 Flash Memory Programming Functions

Flash memory writing and other operations can be performed by transmitting/receiving commands and data according to the selected transmission method. Table 6-2 lists the main flash memory programming functions.

Table 6-2. Main Flash Memory Programming Functions

Function	Description
Batch erase	Erases the entire contents of memory.
Block erase	Erases the contents of specified memory block.
Batch blank check	Checks that the entire contents of memory have been erased.
Block blank check	Checks that the contents of specified block have been erased.
Data write	Write to the flash memory according to the specified write start address and number of bytes of data to be written.
Batch verify	Compares the entire contents of memory with the input data.
Block verify	Compares the contents of specified memory block with the input data.

6.3 Connecting the Flashpro III

The connection between the Flashpro III and μPD78F4937 varies with the transmission method. Figures 6-2 and 6-3 show the connection for each transmission method.

Figure 6-2. Flashpro III Connection in 3-Wire Serial I/O Mode

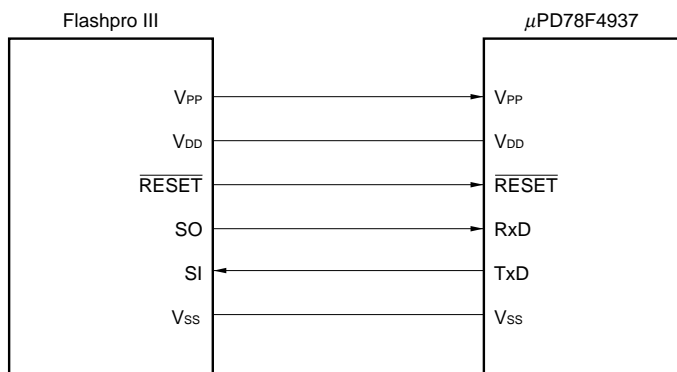

Figure 6-3. Flashpro III Connection in UART Mode

APPENDIX A DEVELOPMENT TOOLS

The following development tools are available for system development using the μPD78F4937.

See also (5).

(1) Language processing software

RA78K4	Assembler package used in common with 78K/IV Series
CC78K4	C compiler package used in common with 78K/IV Series
DF784937	Device file for μPD784937 Subseries
CC78K4-L	C compiler library source file used in common with 78K/IV Series

(2) Flash memory write tools

Flashpro III ^{Note} (PG-FPIII)	Flash writer used only for microcontrollers with internal flash memory
FA-100GF	Flash memory writing adapter for 100-pin plastic QFP (GF-3BA type). Wiring must be performed according to product being used.
FA-100GC	Flash memory writing adapter for 100-pin plastic LQFP (GC-8EU type). Wiring must be performed according to product being used.
Flashpro III controller ^{Note}	Program controlled by a personal computer and which is supported by Flashpro III. Runs under Windows TM 95, etc.

(3) Debugging tools

• **When using the in-circuit emulator IE-78K4-NS**

IE-78K4-NS	In-circuit emulator used in common with 78K/IV Series
IE-70000-MC-PS-B	Power supply unit for IE-78K4-NS
IE-70000-98-IF-C	Interface adapter when the PC-9800 series computer (other than a notebook) is used as the host machine
IE-70000-CD-IF-C	PC card and interface cable when a PC-9800 series notebook is used as the host machine
IE-70000-PC-IF-C	Interface adapter when the IBM PC/AT TM compatible is used as the host machine
IE-784937-NS-EM1 ^{Note}	Emulation board for emulating μPD784937 Subseries
NP-100GF	Emulation probe for 100-pin plastic QFP (GF-3BA type)
NP-100GC	Emulation probe for 100-pin plastic LQFP (GC-8EU type)
EV-9200-GF-100	Socket for mounting on target system board made for 100-pin plastic QFP (GF-3BA type)
TGC-100SDW	Conversion adapter for connecting the target system board made for 100-pin plastic LQFP (GC-8EU type) with NP-100GC
ID78K4-NS	Integrated debugger for IE-78K4-NS
SM78K4	System simulator used in common with 78K/IV Series
DF789437	Device file for μPD784937 Subseries

Note Under development

• When using the in-circuit emulator IE-784000-R

IE-784000-R	In-circuit emulator used in common with 78K/IV Series
IE-70000-98-IF-B IE-70000-98-IF-C	Interface adapter when the PC-9800 series computer (other than a notebook) is used as the host machine
IE-70000-98N-IF	Interface adapter and cable when a PC-9800 series notebook is used as the host machine
IE-70000-PC-IF-B IE-70000-PC-IF-C	Interface adapter when the IBM PC/AT compatible is used as the host machine
IE-78000-R-SV3	Interface adapter and cable when the EWS is used as the host machine
IE-784937-NS-EM1 ^{Note} IE-784937-R-EM1 ^{Note}	Emulation board for emulating μPD784937 Subseries
IE-78400-R-EM	Emulation board used in common with 78K/IV Series
IE-78K4-R-EX2 ^{Note}	Conversion board for emulation probes required to use the IE-784937-NS-EM1 on the IE-784000-R. The board is not needed when the IE-784937-R-EM1 is used.
EP-78064GF-R	Emulation probe for 100-pin plastic QFP (GF-3BA type)
EP-78064GC-R	Emulation probe for 100-pin plastic LQFP (GC-8EU type)
EV-9200GF-100	Socket for mounting on target system board made for 100-pin plastic QFP (GF-3BA type)
TGC-100SDW	Conversion adapter for connecting the target system board made for 100-pin plastic LQFP (GC-8EU type) with NP-100GC
ID78K4	Integrated debugger for IE-784000-R
SM78K4	System simulator used in common with 78K/IV Series
DF784937	Device file for μPD784937 Subseries

Note Under development

(4) Real-time OS

RX78K/IV	Real-time OS for 78K/IV Series
MX78K4	OS for the 78K/IV Series

(5) Notes when using development tools

- The ID78K4-NS, ID78K4, and SM78K4 can be used in combination with the DF784937.
- The CC78K4 and RX78K/IV can be used in combination with the RA78K4 and DF784937.
- The Flashpro III, FA-100GF, FA-100GC, NP-100GF, and NP-100GC are manufactured by Naito Densai Machida Mfg. Co., Ltd. (044-822-3813). Consult the NEC sales representative for purchasing.
- The TGC-100SDW is a product from TOKYO ELETECH CORPORATION.

[MEMO]

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note: Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note: No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note: Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

Some related documents may be preliminary versions. Note that, however, what documents are preliminary is not indicated in this document.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
