General Product Information

Product Test Conditions

SignalSure 30 LEDs are tested and binned using a 20ms monopulse (MP) at 30mA drive current, junction temperature, T_j , of 25°C.

Part Number Nomenclature

Part numbers for SignalSure 30 follow the convention below:

A 1 D T – **B C C C** L 1 1 **D E F G** 0 0

Where:

- B** – designates color (O=Red Orange and S=Super Red)
- C C C** – designates minimum dominant wavelength (612=612nm, 627=627nm and 632=632nm)
- D** – designates minimum flux bin (see Product Bin and Labeling section)
- E** – designates the flux bin range (3=3 subsequent flux bins including the minimum bin)
- F G** – designates forward voltage range in which F is the minimum V_f bin and G is the maximum V_f bin (see Product Bin and Labeling Definitions section)

Therefore, the following part number is used for a SignalSure 30 Super Red, 632nm minimum wavelength, luminous flux range of 1.5 lumens to 2.6 lumens and forward voltage range of 2.00 volts to 2.45 volts:

A 1 D T – **S 6 3 2** L 1 1 **1 3 A C** 0 0

Notes for 4:

1. Proper current derating must be observed to maintain junction temperature below the maximum, so that the LED is maintained below the maximum rated operating case temperature. SignalSure LEDs driven at or above the maximum rated operating case temperature may have shorter lifetime.
2. Measured using human body model (per ANSI/ESDA/JEDEC JS-001-2010) and charged device model (per JESD22-C101F).

Product Bin and Labeling Definitions

Designing with SignalSure

Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact a local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

SignalSure 30 LEDs are labeled using a 3-digit alphanumeric CAT code following the format below:

A B C

Where:

- A** – designates luminous flux bin (example: 4=2.6 lumens to 3.0 lumens)
- B** – designates color code (example: 3=612nm to 618nm)
- C** – designates forward voltage bin (example: B=2.15V to 2.30V)

Therefore, a SignalSure 30 with a lumen range of 2.6 to 3.0, color code of 3 and a forward voltage of 2.15V to 2.30V has the following CAT code:

4 3 B

Luminous Flux Bins
