1. Introduction

The MA106.C GPS/GLONASS/GALILEO and Cellular Combination Hercules Antenna is the newest upgraded model of Taoglas' popular Hercules series. It is a combination 2in1 high performance GPS/GLONASS/GALILEO and penta-band cellular antenna solution for the most reliable asset tracking and remote monitoring. The GPS/GLONASS/GALILEO antenna and LNA have been optimized to provide excellent performance.

The penta-band cellular antenna delivers high efficiency at all common 3G/2G bands worldwide, making it ideal for use on GSM, GPRS, and CDMA systems.

Durable UV and robust PC housing is resistant to vandalism and direct attack. At only 29 mm in height, it complies with the latest EU height restriction directives for roof-mounted objects, with a diameter of 49 mm. It is designed to be covert and not catch on tree branches.

The Hercules can be mounted on metal or non-metal structures as it has a metal ground-plane base integrated inside. A waterproof closed cell foam seal under the base adheres to the surface it is mounted on and can stretch to fit curved surfaces typical on vehicles, preventing water from penetrating any mounting hole.
