## $50 \Omega$ DC to 18 GHz

## The Big Deal

- Dual mechanical transfer switch
- High reliability, 10 million switch cycles
- 10W power rating (cold switching)
- High isolation, 85 dB typ.

## Typical Applications

- Automated test equipment
- Fail-safe / redundancy switching
- Switch matrices

RoHS Compliant

## Product Overview

Mini-Circuits' RC-2MTS-18 comprises a pair of independently controlled, electro-mechanical transfer switches. Each switch operates over a wide bandwidth, from DC to 18 GHz with high isolation ( 85 dB typical), low insertion loss ( 0.2 dB typical) and high input power rating (10W for cold switching). The switches are of a fail-safe and break-before-make-configuration using a patented design which ensures long-term reliability, with a minimum lifetime of 10 million switching cycles when used within the noted specifications.

The switch box is constructed in a compact, rugged metal case ( $4.5 \times 6.0 \times 2.25$ ") with 8 SMA (f) RF connectors on the front panel. The switches are controlled via USB or Ethernet, allowing control directly from a PC, or remotely over a network. Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

Key Features

| Feature | Advantages |
| :--- | :--- |
| Dual transfer switches | Transfer switches provide a simple DPDT switch application (2 input to 2 output switch matrix) and are <br> a useful building block in much larger switch matrices |
| Fail-safe design | The switches revert to a known default state when the DC supply is removed, allowing their use in <br> systems that must continue to operate safely in the event of power failure |
| Break-before-make configuration | Prevents a momentary connection of the old and new signal paths, reducing the inconsistent transient <br> effects that could otherwise be observed during switching |
| USB \& Ethernet control | USB HID and Ethernet (HTTP / Telnet) interfaces provide easy compatibility with a wide range of <br> software setups and programming environments |
| Full software support | User friendly Windows GUI (graphical user interface) allows manual control straight out of the box, <br> while the comprehensive API (application programming interface) with examples and instructions <br> allows easy automation in most programming environments |

## Minimum System Requirements:

| Parameter | Requirements |  |
| :--- | :--- | :--- |
| Interface | USB HID \& Ethernet (HTTP \& Telnet) |  |
| System <br> Requirements | GUI | Windows 98 or later |
|  | USB API DLL | Windows 98 or later and programming environ- <br> ment with ActiveX or .NET support |
|  | USB Direct Programming | Linux, Windows 98 or later |
|  | Ethernet | Windows, Linux or Mac computer with a network <br> port and Ethernet TCP/IP support |
| Hardware | Pentium II or later with 256 MB RAM |  |

## Application Programming Interface (API) <br> Ethernet Support:

- Simple ASCII / SCPI command set for attenuator control
- Communication via HTTP or Telnet
- Supported by most common programming environments

## USB Support (Windows):

- ActiveX COM DLL file for creation of 32-bit programs
- .NET library DLL file for creation of 32 / 64-bit programs
- Supported by most common programming environments (refer to application note AN-49-001 for summary of supported envi ronments)

## USB Support (Linux):

- Direct USB programming using a series of USB interrupt codes

Full programming instructions and examples available for a wide range of programming environments / languages.

## Graphical User Interface (GUI) for Windows - Key Features

- Connect via USB or Ethernet
- Run GUI in "demo mode" to evaluate software without a hardware connection

- View and set switch states at the click of a button
- Configure and run timed switching sequences
- Set start-up switch state
- Configure Ethernet IP settings

## Alternative Models

Mini-Circuits has a number of options for larger switching systems comprising more than 2 transfer switches, or combinations of switch types. Please contact testsolutions @ minicircuits.com with your requirements.

## ZTM Series

The ZTM Series test platform contains 6 customizable windows on the front panel, each of which can be populated with your choice of switch or programmable attenuator components:

- Up to two SPDT mechanical switches (DC to 18 GHz ) per window
- Up to two mechanical transfer switches (DC to 18 GHz ) per window
- One SP4T mechanical switch (DC to 18 GHz ) per window
- One SP6T mechanical switch (DC to 12 GHz ) per window
- Up to two programmable attenuators (0 to 30, 60, 90, 110, and 120 dB ) per window

All combinations shipped within 2-3 weeks of an order!

Please see https://www.minicircuits.com/WebStore/ztm.html for more details.

## RCM-200 Series

The RCM-200 series modular test systems offer flexibility and fast turnaround for compact test setups. The design consists of a small, light-weight chassis with up to three open hardware windows, each of which may be outfitted with your choice of programmable attenuators or switches. A wide range of switch options are available for shipment within 2-3 weeks of an order:
6 mechanical SPDT or transfer (DC-18 GHz) switches
3 mechanical SP4T (DC-18 GHz) or SP6T (DC-12 GHz) switches
2 mechanical SP8T switches (DC-12 GHz)
Custom combinations of SPDT, SP4T, SP6T and transfer switches
Please see https://www.minicircuits.com/WebStore/rcm.html for more details.
