SN65LBC175A-EP

SLLSEU5 – DECEMBER 2016

SN65LBC175A-EP Quadruple RS-485 Differential Line Receiver

1 Features

- Designed for TIA/EIA-485, TIA/EIA-422 and ISO 8482 Applications
- Signaling Rates [1] Exceeding 50 Mbps
- Fail-Safe in Bus Short-Circuit, Open-Circuit, and Idle-Bus Conditions
- ESD Protection on Bus Inputs Exceeds 6 kV
- Common-Mode Bus Input Range –7 V to 12 V
- Propagation Delay Times < 18 ns
- Low Standby Power Consumption < 32 μA
- Pin-Compatible Upgrade for MC3486, DS96F175, LTC489, and SN75175

2 Applications

- Supports Defense, Aerospace, and Medical Applications
  - Controlled Baseline
  - One Assembly and Test Site
  - One Fabrication Site
  - Extended Product Life Cycle
  - Extended Product-Change Notification
  - Product Traceability

(1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

3 Description

The SN65LBC175A-EP is a quadruple differential line receiver with 3-state outputs, designed for TIA/EIA-485 (RS-485), TIA/EIA-422 (RS-422), and ISO 8482 (Euro RS-485) applications.

This device is optimized for balanced multipoint bus communication at data rates up to and exceeding 50 million bits per second. The transmission media may be twisted-pair cables, printed-circuit board traces, or backplanes. The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media and the noise coupling to the environment.

The receiver operates over a wide range of positive and negative common-mode input voltages, and features ESD protection to 6 kV, making it suitable for high-speed multipoint data transmission applications in harsh environments. These devices are designed using LinBiCMOS®, facilitating low power consumption and robustness.

Two EN inputs provide pair-wise enable control, or these can be tied together externally to enable all four drivers with the same signal.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1]

	MIN	MAX	UNIT
Supply voltage, V_{CC} [2]	–0.3	6	V
Voltage at any bus input (steady state), A and B	–10	15	V
Voltage at any bus (transient pulse through 100 Ω, see Figure 10)	–30	30	V
Input voltage at 1,2EN and 3,4EN, V_I	–0.5	V_{CC} + 0.5	V
Receiver output current, I_O	–10	10	mA
Storage temperature, T_{stg}	–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential I/O bus voltages, are with respect to GND and are steady-state (unless otherwise specified).

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[1] — A and B to GND	±6000	V
		Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[1] — All pins	±5000	
		Charged-device model (CDM), per JEDEC specification JESD22-C101[2] — All pins	±2000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage		4.75	5	5.25	V
	Voltage at any bus terminal	A, B	–7		12	V
V_{IH}	High-level input voltage	EN	2		V_{CC}	V
V_{IL}	Low-level input voltage	EN	0		0.8	V
	Output current	Y	–8		8	mA
T_J	Junction temperature		–55		125	°C

6.4 Thermal Information

THERMAL METRIC[1]		SN65LBC175A-EP	UNITS
		D (SOIC)	
		16 PINS	
θ_{JA}	Junction-to-ambient thermal resistance	78	°C/W
θ_{JCtop}	Junction-to-case (top) thermal resistance	39.5	°C/W
θ_{JB}	Junction-to-board thermal resistance	35.4	°C/W
ψ_{JT}	Junction-to-top characterization parameter	8.5	°C/W
ψ_{JB}	Junction-to-board characterization parameter	35.1	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

6.5 Electrical Characteristics

over recommended operating conditions

|	PARAMETER	TEST CONDITIONS			MIN	TYP[1]	MAX	UNIT
V_{IT+}	Positive-going differential input voltage threshold	$-7\ V \leq V_{CM} \leq 12\ V\ (V_{CM} = (V_A + V_B)\ /\ 2)$				−80	−10	mV
V_{IT-}	Negative-going differential input voltage threshold				−200	−120		mV
V_{HYS}	Hysteresis voltage ($V_{IT+} - V_{IT-}$)					−40		mV
V_{IK}	Input clamp voltage	$I_I = -18\ mA$			−1.5	−0.8		V
V_{OH}	High-level output voltage	$V_{ID} = 200\ mV,$ $I_{OH} = -8\ mA$	See Figure 6		2.7	4.8		V
V_{OL}	Low-level output voltage	$V_{ID} = -200\ mV,$ $I_{OL} = 8\ mA$				0.2	0.4	V
I_{OZ}	High-impedance-state output current	$V_O = 0\ V$ to V_{CC}			−1		1	μA
I_I	Line input current	Other input at 0 V, $V_{CC} = 0\ V$ or 5 V	$V_I = 12\ V$				0.9	mA
			$V_I = -7\ V$		−0.7			
I_{IH}	High-level input current	Enable inputs					110	μA
I_{IL}	Low-level input current				−100			μA
R_I	Input resistance	A, B inputs			12			kΩ
I_{CC}	Supply current	$V_{ID} = 5\ V$	1,2EN, 3,4EN at 0 V				32	μA
		No load	1,2EN, 3,4EN at V_{CC}			11	16	mA

(1) All typical values are at V_{CC} = 5 V and 25°C.

6.6 Switching Characteristics

Over recommended operating conditions

	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_r	Output rise time	$V_{ID} = -3\ V$ to 3 V, See Figure 7		2	7	ns
t_f	Output fall time			2	7	ns
t_{PLH}	Propagation delay time, low-to-high level output		8	12	18	ns
t_{PHL}	Propagation delay time, high-to-low level output		8	12	18	ns
t_{PZH}	Propagation delay time, high-impedance to high-level output	See Figure 8		27	39	ns
t_{PHZ}	Propagation delay time, high-level-output to high-impedance			7	24	ns
t_{PZL}	Propagation delay time, high-impedance to low-level output	See Figure 9		29	39	ns
t_{PLZ}	Propagation delay time, low-level-output to high-impedance			12	18	ns
$t_{sk(p)}$	Pulse skew ($|t_{PLH} - t_{PHL}|$)			0.2	2	ns
$t_{sk(o)}$	Output skew[1]				3	ns
$t_{sk(pp)}$	Part-to-part skew[2]				3	ns

(1) Output skew ($t_{sk(o)}$) is the magnitude of the time delay difference between the outputs of a single device with all of the inputs connected together.
(2) Part-to-part skew ($t_{sk(pp)}$) is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same input signals, the same supply voltages, at the same temperature, and have identical packages and test circuits.
(1) See data sheet for absolute maximum and minimum recommended operating conditions.

(2) Silicon operating life design goal is 10 years at 105°C junction temperature (does not include package interconnect life).

(3) Enhanced plastic product disclaimer applies.

8 Detailed Description

8.1 Overview

The SN65LBC175A-EP is a quadruple differential line receiver with tri-state outputs, designed for TIA/EIA-485 (RS-485), TIA/EIA-422 (RS-422), and ISO 8482 (Euro RS-485) applications. This device is optimized for balanced multipoint bus communication at data rates up to and exceeding 50 million bits per second. The transmission media may be twisted-pair cables, printed-circuit board traces, or backplanes. The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media and the noise coupling to the environment.

The receiver operates over a wide range of positive and negative common-mode input voltages, and features ESD protection to 6 kV, making it suitable for high-speed multipoint data transmission applications in harsh environments. These devices are designed using LinBiCMOS®, facilitating low-power consumption and robustness.

Two EN inputs provide pair-wise enable control, or these can be tied together externally to enable all four drivers with the same signal.

8.2 Functional Block Diagram
Copyright © 2016, Texas Instruments Incorporated

8.3 Feature Description

The device can be configured using the enable inputs to select receiver output. The high voltage or logic 1 on the EN pin allows the device to operate on an active-high, and having a low voltage or logic 0 on the EN enables active-low operation. These are simple ways to configure the logic to match the receiving or transmitting controller or microprocessor.

8.4 Device Functional Modes

The receivers implemented in the RS-485 device can be configured using the EN logic pins set to enabled or disabled. This allows users to ignore or filter out transmissions as desired.

Table 1. Function Table[1]

DIFFERENTIAL INPUTS A - B (V_{ID})	ENABLE EN	OUTPUT Y
$V_{ID} \leq -0.2$ V	H	L
-0.2 V $< V_{ID} < -0.01$ V	H	?
-0.01 V $\leq V_{ID}$	H	H
X	L	Z
X	OPEN	Z
Short circuit	H	H
Open circuit	H	H

(1)   H = high level, L = low level, X = irrelevant, Z = high impedance (off), ? = indeterminate
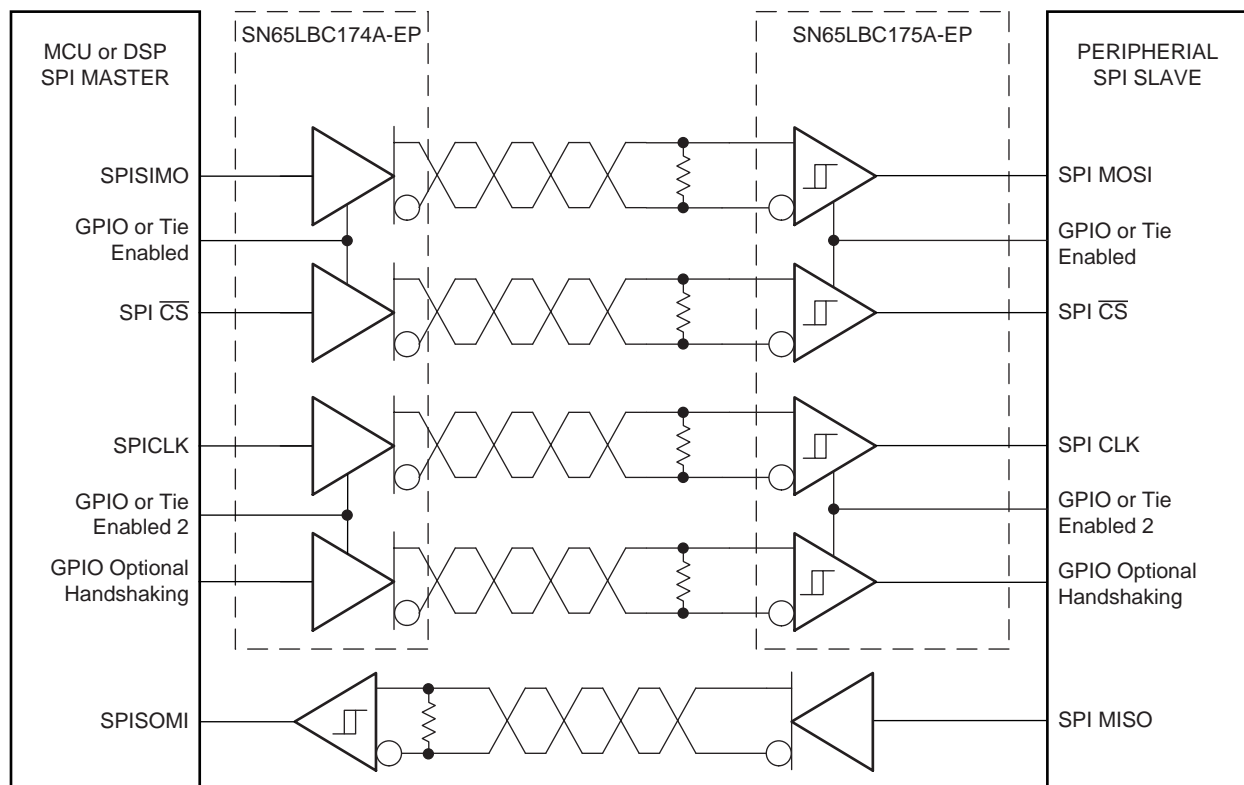

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Extending SPI operation over RS-485 link.

9.2 Typical Application

The following block diagram shows an MCU host connected via RS-485 to a SPI slave device. This device can be an ADC, DAC, MCU, or other SPI slave peripheral.

Copyright © 2016, Texas Instruments Incorporated

Figure 12. DSP-to-DSP Link via Serial Peripheral Interface

9.2.1 Design Requirements

This application can be implemented using standard SPI protocol on DSP or MCU devices. The interface is independent of the specific frame or data requirements of the host or slave device. An additional but not required handshake bit is provided that can be used for customer purposes.

9.2.2 Detailed Design Procedure

The interface design requirements are fairly straight forward in this single source/destination scenario. Trace lengths and cable lengths need to be matched to maximize SPI timing. If there is a benefit to put the interface to sleep, GPIOs can be used to control the enable signals of the transmitter and receiver. If GPIOs are not available, or constant uptime needed, both the enables on transmit and receive can be hard tied enabled.

Typical Application (continued)

The link shown can operate at up to 50 Mbps, well within the capability of most SPI links.
9.2.3 Application Curve

Figure 13. Receiver Inputs and Outputs, 50-Mbps Signaling Rate

10 Power Supply Recommendations

Place 0.1-μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies.

11 Layout

11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
- Connect low-ESR, 0.1-μF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible.
- Place termination resistor as close as possible to the input pins (if end point node).
- Keep trace lengths from input pins to bus as short as possible to reduce stub lengths and reflections on any nodes that are not end points of bus.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.

11.2 Layout Example
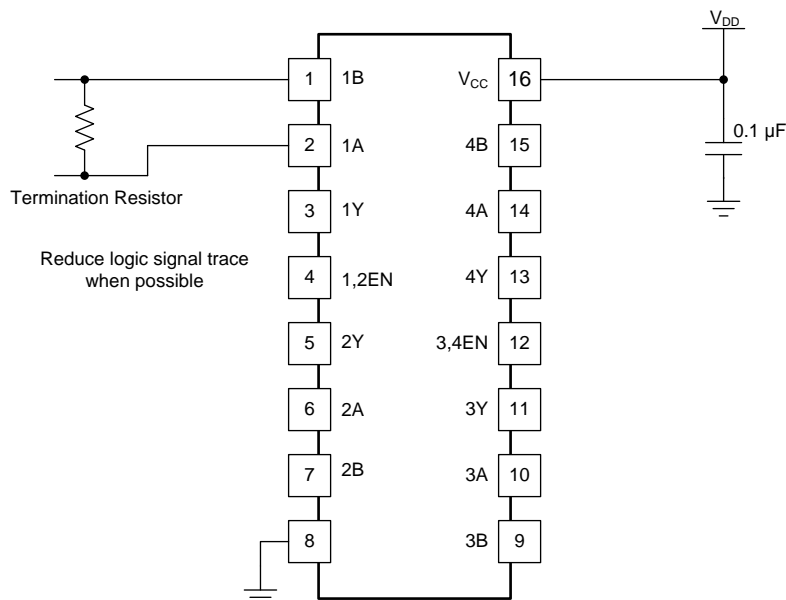

Figure 14. Layout with PCB Recommendations

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community.* Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.3 Trademarks

E2E is a trademark of Texas Instruments.
LinBiCMOS is a registered trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN65LBC175AMDREP	PREVIEW	SOIC	D	16	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-55 to 125	LBC175AEP	

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
