Product Description

The PE42462 is a HaRP™ technology-enhanced absorptive SP6T RF switch that supports a frequency range from 10 MHz to 8 GHz. It delivers high isolation, low insertion loss and fast switching time, making this device ideal for filter bank switching and RF signal routing in wireless infrastructure and wireless applications up to 8 GHz. No blocking capacitors are required if DC voltage is not present on the RF ports.

The PE42462 is manufactured on Peregrine's UltraCMOS® process, a patented advanced form of silicon-on-insulator (SOI) technology.

Peregrine's HaRP technology enhancements deliver high linearity and excellent harmonics performance. It is an innovative feature of the UltraCMOS process, offering the performance of GaAs with the economy and integration of conventional CMOS.

Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

Notes:

- 1) Insertion loss and isolation performance can be improved by a good RF ground on the LS pin (pin 1).
- 2) Defined with S-parameters, relative insertion phase (RFX–RF1) = $\angle S_{(x+1)1} - \angle S_{21}$, where incident Port-1 is RFC, response Port-2 = RF1, and response Port-(x+1) = RFX.
- 3) The input 1dB and 0.1dB compression points are linearity figures of merit. Refer to Table 2 for the RF input power (50Ω).

Switching Frequency

The PE42462 has a maximum 25 kHz switching frequency. Switching frequency describes the time duration between switching events. Switching time is the time duration between the point the control signal reached 50% of the final value and the point the output signal reaches within 10% or 90% of its target value.

Spurious Performance

The PE42462 spur fundamental occurs around 5 MHz. Its typical performance is -162 dBm/Hz, with 30 kHz bandwidth.

Hot-Switching Capability

The maximum hot switching capability of the PE42462 is 20 dBm above 100 MHz. Hot switching occurs when RF power is applied while switching between RF ports.

Thermal Data

Psi-JT (Ψ_{JT}), junction top-of-package, is a thermal metric to estimate junction temperature of a device on the customer application PCB (JEDEC JESD51-2).

$$\Psi_{JT} = (T_J - T_T)/P$$

where

Ψ_{JT} = junction-to-top of package characterization parameter, °C/W

T_J = die junction temperature, °C

T_T = package temperature (top surface, in the center), °C

P = power dissipated by device, Watts

Table 4 • Thermal Data for PE42462

| Parameter | Typ | Unit |
|--|-----|------|
| Ψ_{JT} | 23 | °C/W |
| Θ_{JA} , junction-to-ambient thermal resistance | 63 | °C/W |

Control Logic

Notes:

- 1) LS has an internal 1 MΩ pull-up resistor to logic high. Connect LS to GND externally to generate a logic 0. Leaving LS floating will generate a logic 1.
- 2) LS = don't care, V3 = 0, V2 = V1 = 1, all ports are terminated to provide an all isolated state.

Evaluation Kit

The high-throw count RF switch evaluation kit (EVK) includes hardware required to control and evaluate the functionality of the high-throw count switches. The high-throw count RF switch evaluation software can be downloaded at www.psemi.com and requires a PC running Windows® operating system to control the USB interface board. Refer to the *Multi-throw Count RF Switch Evaluation Kit (EVK) User's Manual* for more information.

Table 8 • Pin Descriptions for PE42462

| Pin No. | Pin Name | Description |
|-------------------------------|--------------------|--|
| 1 | LS | Logic Select—used to determine the definition for V1, V2 and V3 pins |
| 2 | RF2 ⁽¹⁾ | RF port 2 |
| 3, 5–7, 12–14, 16, 18, 21, 23 | GND | Ground |
| 4 | RF3 ⁽¹⁾ | RF port 3 |
| 8 | V _{DD} | Supply voltage (nominal 3.3V) |
| 9 | V1 | Digital control logic input 1 |
| 10 | V2 | Digital control logic input 2 |
| 11 | V3 | Digital control logic input 3 |
| 15 | RF4 ⁽¹⁾ | RF port 4 |
| 17 | RF5 ⁽¹⁾ | RF port 5 |
| 19 | RF6 ⁽¹⁾ | RF port 6 |
| 20 | NC ⁽²⁾ | No connect |
| 22 | RFC ⁽¹⁾ | RF common port |
| 24 | RF1 ⁽¹⁾ | RF port 1 |
| Pad | GND | Exposed pad: ground for proper operation |

Notes:

- 1) RF pins 2, 4, 15, 17, 19, 22 and 24 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.
- 2) Pin 20 (NC) can be connected to GND or left not connected externally.
