SCAS299H - JANUARY 1993 - REVISED AUGUST 2003

- Operates From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- Max t_{pd} of 7 ns at 3.3 V
- Typical V_{OLP} (Output Ground Bounce)
 <0.8 V at V_{CC} = 3.3 V, T_A = 25°C
- Typical V_{OHV} (Output V_{OH} Undershoot)
 >2 V at V_{CC} = 3.3 V, T_A = 25°C
- Supports Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With 3.3-V V_{CC})
- I_{off} Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 250 mA Per JESD 17

DB, DW, OR PW PACKAGE (TOP VIEW)

description/ordering information

This octal registered transceiver is designed for 1.65-V to 3.6-V V_{CC} operation.

The SN74LVC543A contains two sets of D-type latches for temporary storage of data flowing in either direction. Separate latch-enable (LEAB or LEBA) and output-enable (OEAB or OEBA) inputs are provided for each register to permit independent control in either direction of data flow.

The A-to-B enable (\overline{CEAB}) input must be low to enter data from A or to output data from B. If \overline{CEAB} is low and \overline{LEAB} is low, the A-to-B latches are transparent; a subsequent low-to-high transition of \overline{LEAB} places the A latches in the storage mode. With \overline{CEAB} and \overline{OEAB} both low, the 3-state B outputs are active and reflect the data present at the output of the A latches. Data flow for B to A is similar to that of A to B, but uses \overline{CEBA} , \overline{LEBA} , and \overline{OEBA} .

This device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment.

ORDERING INFORMATION

TA	PACKAGE [†]		ORDERABLE PART NUMBER	TOP-SIDE MARKING
	0010 014	Tube of 25	SN74LVC543ADW	11/05404

TEXAS INSTRUMENTS

[‡]Output level before the indicated steady-state input conditions were established

SCAS299H - JANUARY 1993 - REVISED AUGUST 2003

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage range, V _{CC}	0.5 V to 6.5 V
Input voltage range, V _I : (see Note 1)	
Voltage range applied to any output in the high-impedance or power-off state, VO	
(see Note 1)	0.5 V to 6.5 V
Voltage range applied to any output in the high or low state, VO	
(see Notes 1 and 2)	\dots -0.5 V to V _{CC} + 0.5 V
Input clamp current, I_{IK} ($V_I < 0$)	–50 mA
Output clamp current, I _{OK} (V _O < 0)	–50 mA
Continuous output current, IO	±50 mA
Continuous current through V _{CC} or GND	±100 mA
Package thermal impedance, θ _{JA} (see Note 3): DB package	63°C/W
DW package	46°C/W
PW package	88°C/W
Storage temperature range, T _{stq}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
 - 2. The value of V_{CC} is provided in the recommended operating conditions table.
 - 3. The package thermal impedance is calculated in accordance with JESD 51-7.
