

**Quad SPST, CMOS Analog Switches**

The DG201A and DG202 quad SPST analog switches are designed using Intersil's 44V CMOS process. These bidirectional switches are latch-proof and feature break-before-make switching. Designed to block signals up to 30V<sub>p-p</sub> in the OFF state, the DG201A and DG202 offer the advantages of low ON resistance ( $\leq 175\Omega$ ), wide input signal range ( $\pm 15V$ ) and provide both TTL and CMOS compatibility.

The DG201A and DG202 are specification and pinout compatible with the industry standard devices.
