

1/2,1/3 DUTY LCD DRIVER WITH KEY SCAN

GENERAL DESCRIPTION

The NJU6435 is a 1/2 or 1/3 duty LCD driver for segment type LCD panel with key scan function.

Display data and Key input data are communicated by serial data transmission, therefore, the communication between NJU6435 and MPU is performed by only 5 lines.

80-segment or 120-segment are displayed by 40-segment driver and 2- or 3-common driver.

The key scan function scanning up to 30 keys and the data is transferred to the MPU.

The NJU6435 can design simple front panel, therefore it is easy to apply car mounted audio, general audio and other products which have a display and key input.

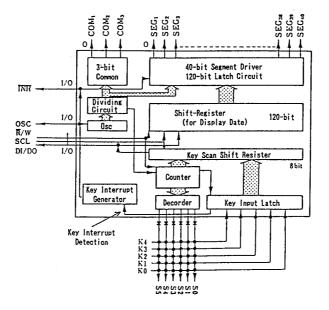

FEATURES

- 40-Segment Drivers
 - Duty Ratio and
Bias Level1/2 duty, 1/2 bias80-Segment Drive (Version D)1/3 duty, 1/2 bias 120-segment Drive (Version E)
1/3 duty, 1/3 bias 120-segment Drive (Version F)
- 30 Key Scan Function (6-out x 5-in Matrix)
- Serial Data Transmission
- Display Off Function (INH Terminal)
- Operating Voltage --- 5V±10%
- Package Outline --- QFP 64
- C-MOS Technology

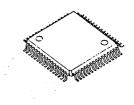

LINE UP

LINE UP	DUTY RATIO	BIAS LEVEL	MAX. DISPLAY SEGMENT	COMMON
NJU6435D	1/2 Duty	1/2 Bias	80 Segment	233
NJU6435E	1/3 Duty	1/2 Bias	120 Segment	
NJU6435F	1/3 Duty	1/3 Bias	120 Segment

TERMINAL DESCRIPTION

NO.	SYMBOL	FUNCTION				
1~40	$SEG_1 \sim SEG_{40}$	Segment Output Terminal				
41~46	SO ~ S5	Key Scanning Signal Output Terminal				
47~51	K0 ~ K4	Key Scanning Input Terminal (Built-in Pull-down Resistance)				
52	OSC	CR Oscillating Terminal (External C, R Connecting)				
53,55	V _{DD} , Vss	Power Supply				
54	TNH	Display-Off Control /Key Input Interrupt Signal Output Terminal				
56		Read / Write Control Terminal				
57	SCL	Serial Data Transmission Clock Terminal				
58	D1/D0	Serial Data Input / Output Terminal				
59,60	TEST1, TEST2	Testing Terminal (Normally OPEN)				
61	ŃC	Non Connection				
62 63 64	COM3 COM2 COM1	Common Output Terminal. (In the Version D, COM₃ is no active (Vss))				

-New Japan Radio Co.,Ltd.

FUNCTIONAL DESCRIPTION

(1) Operation of each block

- (1-1) Oscillation Circuit
 Oscillation by connecting external resistor and capacitor.
 This circuits supply the basical clock signal to other circuits like as common driver and segment driver and key scan circuits.
- (1-2) Dividing Circuit This circuit divide the oscillating frequency, and generate the common and segment output timing signals.
- (1-3) Common Driver Output the common driving signal for LCD.
- (1-4) Segment Driver
 Output the segment driving signal for LCD.
 ON and OFF signal output according to the latched data.
- (1-5) Shift-Register During the R/W signal is "H", the data input to the shift-register by synchronousing the shift clock on SCL terminal.
- (1-6) Counter circuitThis circuits generate key scanning timing. When the key input, the data in the counter is transferred to the key scan shift resistor.
- (1-7) Decoder Decoding the counter output and generate the key scan signal.
- (1-8) Key Input Latch When the key depressed, the decoder output is transfer to the latch.
- (1-9) Key Scan Shift Register Output the data sent from counter circuits and key input latch to the MPU by serial format through the DI/DO port.
- (2) Mode of each terminal and Initialization

(2-1) Mode of each Terminal controlled by \overline{R}/W signal

Ř∕₩	I N H	DI/D0
Н	LCD Display Control Mode (Input) "H" - Display ON "L" - Display Enforced OFF	LCD Display Data Input Mode (Input) "H" - ON "L" - OFF
	Key Scan is stopped	
	Key Scan Mode (Output)	Key Input Signal Output Mode (Output)
L	When key input, Interrupt signal	After key interrupt signal output, key
	Output	input data output from this terminal
	LCD enforced off is not effective	synchronized by the clock signal.

(2-2) Initialization

The NJU6435 series doesn't have a initialization function for the display data. Therefore, the data in the Shift Register and Latch connected to the segment driver is unfixed when the power turns on.

To avoid the no meaning display, the \overline{R}/W = "H" and \overline{INH} = "L" status should be kept during the display data transmission from the controller to the NJU6435.

(4) Key Input Data Output Format

(4-1) Data Format

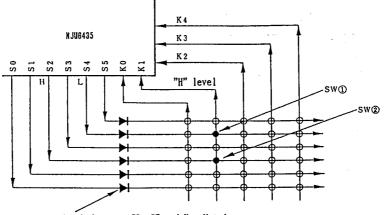

Key Scan Signal Correspond to Counter Data is as follows:

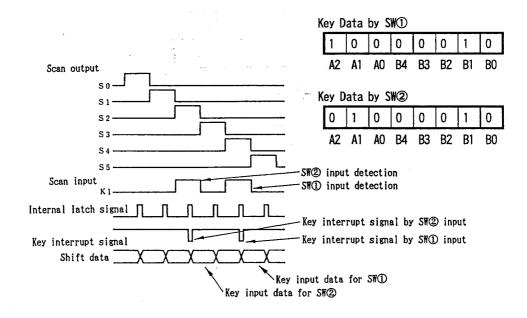

(4-2) Key Scan Output Data in Double or More Input.

In case of two or more key are depressed at same time, the output data is as follows: Below example is mentioned SW① and SW② are depressed at once.

In this time, two of key scan code is output as follows:
