

#### **GENERAL DESCRIPTION**

The CM1117A is a series of low dropout three-terminal regulators with a dropout of 1.1V at 600mA output current.

These products have been optimized for low voltage where transient response and minimum input voltage are critical. These CM1117A provide current limit and thermal shutdown. Its circuit includes a trimmed band-gap reference to assure output voltage accuracy to be within  $\pm$  1%. On –chip thermal shutdown provides protection against any combination of overload and ambient temperatures that would create excessive junction temperatures.

The CM1117A is available in 2.5V and 3.3V versions. The fixed versions integrate the adjust resistors. It is also available in an adjustable version which can set the output voltage with two external resistors.

#### **FEATURES**

- ◆ Low Dropout Voltage: 1.1V at 600mA output Current.
- ◆ Output Noise from 10Hz to 10KHz: 0.003%
- ◆ PSRR at Io = 300mA and f =120Hz: 75dB
- ◆ Output Voltage Accuracy: ±1%
- On-Chip Thermal Shutdown
- ♦ Maximum Quiescent Current: I<sub>QMAX</sub> =5mA
- ◆ ESD (Human Body Model): 3.5KV
- ◆ Operation Junction Temperature –40 to 125°C

#### **APPLICATIONS**

- ◆ DVD/CD-ROM
- USB Device
- Add-on Card
- DVD Player
- ◆ PC Motherboard

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.
