ORDERING INFORMATION

Type	JE10	-1/	12	-H	S	T	-L2	-R	(XXX)
Version	1: No auxiliary convexity, no manual switch 2: No auxiliary convexity, with manual switch 3: With auxiliary convexity, no manual switch 4: With auxiliary convexity, with manual switch								
Coil voltage	6, 12, 24, 48VDC								
Contact form	H: 1 Form A Z: 1 Form C								
Construction ¹⁾	S: Wash tight (only for JE10-1 & JE10-3) Nil: Flux proofed								
Contact material	T: AgSnO ₂ Nil: AgCdO (No UL approval)								
Sort	L1: Single coil latching L2: Double coil latching								
Polarity	R: Reverse polarity (See Wiring diagram) Nil: Standard polarity (See Wiring diagram)								
Customer special code ²⁾	(Only for special requirements) e.g. (551) stands for RoHS compliant (Cadmium containing contacts) (555) stands for RoHS compliant (Cadmium-free contacts)								

- Notes:** 1) Under the ambience with dangerous gas like H₂S, SO₂ or NO₂, wash tight type is recommended; please test the relay in real applications. If the ambience allows, flux proofed is preferentially recommended.
 2) JE10 is an environmental friendly product. Please mark a special code (555) or (551) when ordering. (551) stands RoHS compliant with Cadmium contact; (555) stands for RoHS compliant with Cadmium-free contact.
 3) As to wash tight type, before using relay, please remove the vent part on the top of the cover.
 4) Considering the initial state might be changed in transit (terminal 3# and 4# is opening by default), upon required, position should be set or reset.
 5) As to lamp load, capacitive load, motor load or some occasion asking for according with RoHS, please choose AgSnO₂ contact material.

Notice

1. Relay is on the "set" status when being released from stock, with the consideration of shock risen from transit and relay mounting, relay would be changed to "reset" status, therefore, when application (connecting the power supply), please reset the relay to "set" or "reset" status on request.
2. In order to maintain "set" or "reset" status, energized voltage to coil should reach the rated voltage, impulse width should be 5 times more than "set" or "reset" time. Do not energize voltage to "set" coil and "reset" coil simultaneously. And also long energized time (more than 1 min) should be avoided.
3. In order to avoid changing operate voltage, products should not be kept in strong magnetic field during transportation, storage and application.
