

# AN7332K/S

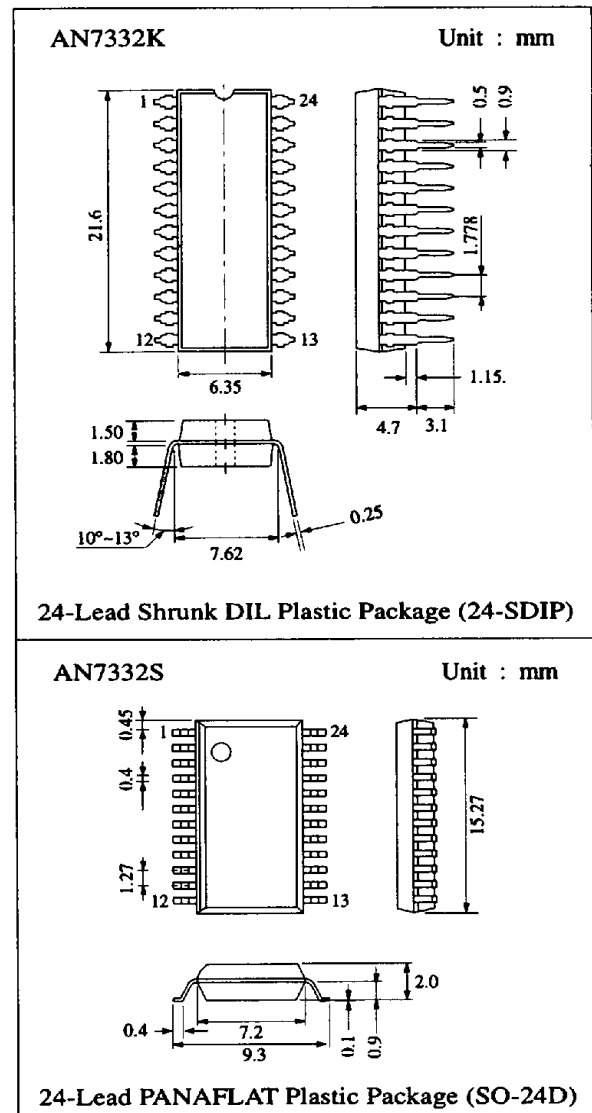

## Dual 4-Bands Graphic Equalizer IC

### ■ Description

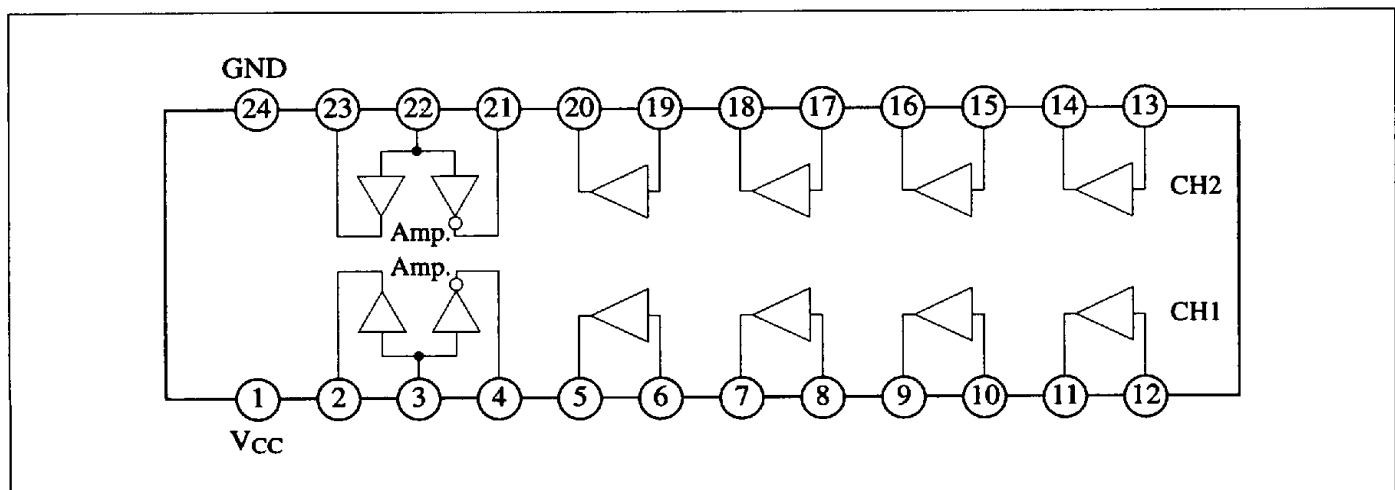

The AN7332K/S are the monolithic integrated circuits designed for dual 4-bands graphic equalizer most suitably used for radio cassette recorder and portable stereo set. Two channel 4-bands graphic equalizer can be composed by applying resonance frequency setting capacitor and variable resistor externally. Boost and cutting quantity is adjusted.

### ■ Features

- Wide operating supply voltage range:  
 $V_{CC} = 3V \sim 14.4V$
- The resonance frequency is fixed by using suitable capacitors
- Dual-channel IC make compact circuit design possible
- Low current consumption: 2.8mA type ( $V_{CC} = 5V$ )
