## Multilayer Chip Inductors - LK/CK/CKP Series

**Features:**

- Internal printed coil structure creates a closed magnetic circuit which acts as a magnetic shield eliminating crosstalk, thus permitting higher mounting densities.
- Multilayer block structure yields higher reliability
- The smallest mH inductors in the world (LK1005 Series)
- Low profile below 1mm on 1206 case size (CKP Series)
- Low DC power dissipation due to Low Rdc with High Aspect Ratio internal conductor that stands on the Green Sheet and Printing technologies (CKP Series)

**Operating Temperature:**

- -40°C to +85°C

**Applications:**

- Any general circuit in portable equipment in which a compact size and high mounting densities are required (LK Series)
- Separation of analog and digital circuits (CK Series)
- Prevents interference between PLL and other digital circuits (CK Series)
- DC/DC convertor for mobile equipment, cellular phones, DSC and DVC (CK Series)

## Multilayer Ferrite Chip Beads - BK Series

### BK Features:

- Internal silver printed layer creates a closed circuit which acts as a magnetic shield to minimize heat generation and crosstalk
- No need for grounding provides greater circuit design flexibility
- Several material types and a broad range of impedance values provide noise countermeasures for various applications

HS: Suppresses the XL component. Helps stop the reduction of the wave-form integrity (digital wave-form overshoot, etc)

HM: Increases the Z characteristics sharply above 20MHz and is applicable for radiated noise in the 100MHz-300MHz range. Especially effective on video signal lines.

LL: Designed as a noise countermeasure for 200MHz-500MHz range where the rise of the Z component is in the high frequency area.

LM: Intended for noise suppression around 200MHz. Effectively increase attenuation

HW: The best material in the BK Series to suppress the XL component and stop the reduction of the wave-form integrity while maintaining attenuation in the high frequency area.

TS: Reduced DC resistance version for noise countermeasures around LSI power supplies

### BKP Features:

- Low Rdc values reduce power dissipation and extend battery life
- No need for grounding provides greater circuit design flexibility

### BK Applications:

- High frequency noise countermeasure in personal computers, digital cameras and other information system products. For use on digital product clock lines and general signal lines.
- Radiated noise suppression in computer or printer interfaces harness connectors.
- Noise suppression in video and other AV products
- Prevents interference between circuits in cellular phones (PHS, PDC, etc)
- Due to the closed internal circuit which acts as a magnetic shield, the TS material is extremely effective as a noise filter on LSI power supplies where downsizing of components is needed.

### BKP Applications:

- High frequency noise countermeasures on the DC power supply line in personal computers and other information system products
- Noise suppression in USB and IEEE1294 interface
- Prevents interference between circuits in mobile systems (PDC, PHS, PDA)

### Operating Temperature:

- BK: -55°C to +125°C (includes self-generated heat)
- BKP: -55°C to +85°C (includes self-generated heat)
