# Description

Specifically designed for Automotive applications, this HEXFET® Power MOSFET utilizes the latest processing techniques to achieve extremely low on-resistance per silicon area. Additional features of this design are a 175°C junction operating temperature, fast switching speed and improved repetitive avalanche rating. These features combine to make this design an extremely efficient and reliable device for use in Automotive applications and a wide variety of other applications.

# **Absolute Maximum Ratings**

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only; and functional operation of the device at these or any other condition beyond those indicated in the specifications is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions. Ambient temperature (TA) is 25°C, unless otherwise specified.

Symbol	Parameter	Max.	Units
I <sub>D</sub> @ T <sub>C</sub> = 25°C	Continuous Drain Current, V <sub>GS</sub> @ 10V (Silicon Limited)	459

t <sub>on</sub>	Forward Turn-On Time	Intrinsio	turn-or	time is	negligil	ole (turn-on is dominated by L <sub>S</sub> +L <sub>D</sub> )

#### Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature. (See fig. 11)
- ② Limited by  $T_{Jmax}$ , starting  $T_J = 25$ °C, L = 0.21mH,  $R_G = 25\Omega$ ,  $I_{AS} = 30$ A,  $V_{GS} = 10$ V. Part not recommended for use above this value.
- $\oplus$  C<sub>oss</sub> eff. is a fixed capacitance that gives the same charging time as C<sub>oss</sub> while V<sub>DS</sub> is rising from 0 to 80% V<sub>DSS</sub>
- © Limited by T<sub>Jmax</sub>, see Fig.12a, 12b, 15, 16 for typical repetitive avalanche performance.
- This value determined from sample failure population. 100% tested to this value in production.
- When mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994
- R<sub>θ</sub> is measured at T<sub>J</sub> approximately 90°C

# Notes on Repetitive Avalanche Curves , Figures 15, 16:

(For further info, see AN-1005 at www.infineon.com)

- Avalanche failures assumption:
   Purely a thermal phenomenon and failure occurs at a temperature far in excess of T<sub>imax</sub>. This is validated for every part type.
- 2. Safe operation in Avalanche is allowed as long as T<sub>jmax</sub> is not exceeded.
- 3. Equation below based on circuit and waveforms shown in Figures 12a, 12b.
- 4. PD (ave) = Average power dissipation per single avalanche pulse.
- 5. BV = Rated breakdown voltage (1.3 factor accounts for voltage increase during avalanche).
- 6. lav = Allowable avalanche current.
- 7.  $\Delta T$  = Allowable rise in junction temperature, not to exceed  $T_{jmax}$  (assumed as 25°C in Figure 15, 16).

tav = Average time in avalanche.

D = Duty cycle in avalanche =  $t_{av} \cdot f$ 

ZthJC(D, tav) = Transient thermal resistance, see Figures 13)

$$\begin{split} P_{D\;(ave)} &= 1/2\;(\;1.3\cdot BV\cdot I_{av}) = \Delta T/\;Z_{thJC}\\ I_{av} &= 2\Delta T/\;[1.3\cdot BV\cdot Z_{th}]\\ E_{AS\;(AR)} &= P_{D\;(ave)}\cdot t_{av} \end{split}$$
